

Dear Practice Better Hiring Team,

I am applying for the Intermediate DevOps Engineer role because its focus on scalable infrastructure, reliable delivery, observability, and engineering ownership closely matches the work I have led throughout my career. I bring 18 years across software, systems, and DevOps engineering, including extensive hands-on work with Terraform, CI/CD, Kubernetes, Docker, Linux, monitoring, incident response, and developer enablement.

At Energir, I standardized CI/CD across 12 teams, nine runtimes, and more than 70 applications. I led Azure modernization using Terraform and Ansible, introduced reusable pipelines with built-in quality gates, and made failures easier to diagnose by separating application issues from platform failures. I also built monitoring and automated remediation to reduce recovery time and ran recurring enablement sessions so teams could adopt the new practices independently.

At Desjardins, I built a Python/FastAPI service that validated approximately 250 enterprise JFrog repositories every four hours and published continuous health signals to Dynatrace. I automated on-demand environments using Kubernetes and ArgoCD, added Splunk alerts for configuration changes made outside the delivery pipeline, and designed the validation engine to become the regression-safety net for a major platform upgrade. Earlier at Tink, I centralized Jenkins delivery for more than 80 applications and automated operations across a 600-server environment.

My strongest recent cloud depth is in Microsoft Azure rather than AWS. I did build an AWS migration target using EC2, S3, Route 53, VPC, caching, and a serverless relational database, although the client cancelled before production cutover. I also recognize that my overall experience exceeds the stated intermediate level. I am applying because the hands-on platform scope, remote-first environment, and mission of supporting health and wellness practitioners are compelling, and because I can contribute immediately while remaining close to the engineering work.

I would welcome the opportunity to help Practice Better strengthen the availability, performance, and delivery foundations of its platform.

Sincerely,

Marc Berthelette
