Sureify Re: Senior DevOps Engineer

Dear Sureify Hiring Team,

I'm applying for the Senior DevOps Engineer role. Scalable infrastructure and production reliability for regulated, customer-facing platforms is where I've spent most of the last several years: at Desjardins, I designed and built a Python/FastAPI service that continuously validated ~250 enterprise repository configurations and extended it into the regression-safety net for a major platform upgrade. At Énergir, I drove incident RCA and built the monitoring, observability, and automated remediation practices that reduced MTTR across 70+ applications in a regulated energy environment — the same reliability discipline a life-and-annuity insurance platform needs.

Terraform and CI/CD are strengths I've built over years of infrastructure-as-code work at Énergir, and I run Kubernetes and ArgoCD in production at Desjardins. On AWS, I built a client's full target environment from scratch at Tink — EC2, S3, Route 53, VPC, self-managed memcached, a serverless relational database — giving me a concrete, checkable answer to AWS requirements rather than a "willing to learn." I should note plainly: that AWS build was roughly six months of hands-on work, provisioned by hand rather than with Terraform, and the client cancelled before cutover — real experience, honestly bounded.

I'm incorporated in Canada, fully bilingual, and available to start immediately on a remote basis.

Best regards,

Marc Berthelette
