Professional Summary

Senior Site Reliability Engineer with 18 years operating and hardening production systems across financial services and energy. Built the Python/FastAPI health-monitoring service and validation harness that gave 250 enterprise JFrog Artifactory repositories continuous health signal and de-risked a platform-wide version upgrade. Drives incident RCA, observability, and automated remediation to cut MTTR, and standardizes infrastructure with Terraform and Ansible across Azure and AWS. Carries 24/7 production on-call comfortably and applies disciplined, scope-gated AI-assisted engineering practices (including Claude Code) to day-to-day delivery.

Core Expertise

Reliability & Observability	Dynatrace, Splunk, ELK Stack, incident response, RCA, MTTR reduction, automated remediation, on-call rotation
Cloud Infrastructure	Microsoft Azure, AWS (EC2, S3, Route 53, VPC), Terraform, Ansible, Puppet
Containers & Delivery	Kubernetes, Docker, ArgoCD, GitHub Actions, Jenkins, CI/CD automation
AI-Assisted Engineering	Claude Code, scope-gated adoption, human-validation checkpoints before production promotion
Programming & Scripting	Python, FastAPI, Bash, C++, Java, SQL, NoSQL

Work Experience

Énergir — Senior DevOps Engineer

Montréal, QC | September 2021 – Present

- Drove root-cause analysis on critical production incidents and implemented proactive monitoring, observability dashboards, and automated remediation to reduce MTTR across 12 application teams and 70+ applications.
- Standardized CI/CD delivery across nine distinct runtimes, entering most with no prior experience and reverse-engineering each before automating it.
- Led cloud modernization for 5–10 mission-critical services on Microsoft Azure and implemented Terraform and Ansible infrastructure-as-code, standardizing provisioning and reducing configuration drift across dev, staging, and production.
- Introduced AI-assisted engineering practices over the past 6–9 months, researching and applying hard scope gates and human-validation checkpoints before AI-generated code reaches production; flagged the organization's lack of equivalent safeguards to leadership.

Key technologies: Python, Microsoft Azure, Terraform, Ansible, Dynatrace, CI/CD, incident response

Desjardins — Senior DevOps Engineer (Contract)

Montréal, QC (Remote) | October 2025 – March 2026 — *concurrent engagement, delivered alongside the Énergir role*

- Designed and built a Python/FastAPI service that tested the configuration of ~250 enterprise JFrog Artifactory repositories every 4 hours, publishing results to Dynatrace with technology-segmented health dashboards.
- Extended the harness into the regression-safety net for the enterprise JFrog Artifactory version upgrade by making validation logic tool-agnostic and test cases configurable.
- Automated on-demand Artifactory provisioning with Kubernetes and ArgoCD for safe, self-service testing of configuration changes.
- Built Splunk alerting to detect manual configuration changes made outside the CI/CD pipeline, improving auditability.

Key technologies: Python, FastAPI, Kubernetes, ArgoCD, Dynatrace, Splunk, GitHub Actions

Tink — DevOps Engineer

Montréal, QC | January 2018 – August 2021

- Part of a 24/7 on-call rotation supporting all production systems and applications across a fleet of 600+ servers.
- Built a self-healing response for a recurring, unstable Elasticsearch cluster — automated detection and remediation eliminated a manual-page failure mode.
- Built centralized log aggregation using the ELK Stack, enabling proactive detection of production anomalies and reducing incident response time.
- Built the compute, caching, and database layers of a client's full AWS migration target environment (EC2, S3, Route 53, VPC, self-managed memcached, serverless relational database) with no prior AWS experience; the client cancelled the migration before cutover.

Key technologies: AWS (EC2, S3, Route 53, VPC), Puppet, ELK Stack, Jenkins, Bash

SOVO Technologies — Lead Technician → Software Engineer

Montréal, QC | November 2008 – December 2017

- Oversaw all company IT infrastructure, including a zero-downtime server relocation, and eliminated single points of failure through redundancy.
- Wrote production software for roughly seven years before the Software Engineer title formalized the work.

Key technologies: C++, Java, SQL, VMware vSphere, Active Directory

Education

Bachelor of Automated Manufacturing Engineering — École de Technologie Supérieure (ÉTS), Montréal, QC | 2005 – 2016

DCS in Computer Science Technology — Cégep André-Laurendeau, Montréal, QC | 2002 – 2005
