Professional Summary

Senior DevOps and platform engineer with 18 years across software development, infrastructure, and production operations. Standardized CI/CD for 12 teams and 70+ applications at Energir, built an extensible Python/FastAPI health and validation platform for approximately 250 enterprise Artifactory repositories at Desjardins, and centralized delivery across 80+ applications at Tink. Deep Microsoft Azure, Terraform, CI/CD, observability, incident response, and developer-enablement experience, with hands-on Kubernetes, Docker, ArgoCD, and AWS infrastructure delivery. Known for learning unfamiliar application ecosystems quickly and replacing fragile processes with reusable, reliable platforms.

Core Expertise

CI/CD and Release Engineering	Azure DevOps, GitHub Actions, Jenkins, pipeline-as-code, quality gates, deployment automation
Cloud and Infrastructure Automation	Microsoft Azure, Terraform, Ansible, Kubernetes, Docker, ArgoCD, AWS infrastructure foundations
Reliability and Operations	Incident response, root-cause analysis, MTTR reduction, automated remediation, high availability, on-call
Observability	Dynatrace, Splunk, ELK Stack, monitoring, dashboards, alerting, health validation
Software and Systems	Python, FastAPI, Bash, Java, C++, Linux, SQL, heterogeneous application platforms

Work Experience

Energir - Senior DevOps Engineer

Montreal, QC | September 2021 - Present

- Standardized CI/CD across nine runtimes and more than 70 applications for 12 teams, replacing fragile manual delivery with reusable pipelines and built-in quality gates.
- Rebuilt Salesforce delivery with no prior Salesforce experience, replacing legacy ANT scripts and adding a sandbox validation pipeline that reduced missed deployment windows from a recurring problem to one since launch.
- Led modernization of 5-10 mission-critical services on Microsoft Azure and used Terraform and Ansible to standardize dev, staging, and production environments.
- Drove root-cause analysis on critical incidents and built monitoring, dashboards, and automated remediation that reduced Mean Time to Recovery across the application estate.
- Made pipeline failures self-diagnosing by separating application-code errors from platform errors, reducing false-positive escalations and helping teams resolve failures faster.
- Led platform adoption through recurring enablement sessions and knowledge transfer for all 12 application teams.

Key technologies: Microsoft Azure, Azure DevOps, GitHub Actions, Terraform, Ansible, Python, Java, Node.js delivery, Docker, Databricks, CloudFoundry, Salesforce

Desjardins - Senior DevOps Engineer (Contract)

Montreal, QC (Remote) | October 2025 - March 2026 - concurrent engagement delivered alongside the Energir role

- Built a Python/FastAPI service that validated approximately 250 enterprise JFrog Artifactory repositories every four hours and published continuous health signals to Dynatrace.
- Designed the validation engine to be tool-agnostic and configurable, enabling administrator self-service and turning it into the regression-safety net for an enterprise JFrog upgrade.

- Automated on-demand Artifactory environment provisioning with Kubernetes and ArgoCD for safe, repeatable testing.
- Added Splunk alerting for configuration changes made outside the delivery pipeline and implemented artifact lifecycle controls.

Key technologies: Python, FastAPI, JFrog Artifactory, Kubernetes, ArgoCD, GitHub Actions, Dynatrace, Splunk, Docker, Helm

Tink - DevOps Engineer

Montreal, QC | January 2018 - August 2021

- Centralized Jenkins Pipeline as Code across 80+ applications for 20+ clients, standardizing delivery across heterogeneous technology stacks and adding release visibility through Jira.
- Automated patching and kernel-update reboots across 600+ servers using Puppet and Spacewalk, reducing the process to a monthly verification check with near-zero downtime.
- Reduced on-call frequency from roughly one page every two rotations to one every four or five through root-cause analysis, prevention, and self-healing automation.
- Built the compute, caching, database, VPC, and Route 53 layers of an AWS migration target using EC2, S3, self-managed memcached, and a serverless relational database; the client cancelled before production cutover.

Key technologies: AWS, Jenkins, Puppet, Python, Bash, Linux, ELK Stack, Jira, PRTG, Spacewalk

SOVO Technologies - Lead Technician to Software Engineer

Montreal, QC | November 2008 - December 2017

- Owned company infrastructure and implemented a redundant architecture that eliminated single points of failure, including a zero-downtime server relocation.
- Wrote production software for approximately seven years, including a production scheduling system and multilingual voice-recognition evaluation tooling.

Key technologies: C++, Java, SQL, Linux, Windows Server, VMware vSphere, networking, backup and recovery

Education

Bachelor of Automated Manufacturing Engineering - Ecole de Technologie Supérieure (ETS), Montreal, QC | 2005 - 2016

DCS in Computer Science Technology - Cégep André-Laurendeau, Montreal, QC | 2002 - 2005
