

Marc Berthelette

DevOps Specialist | Platform Engineering | Product-Squad Enablement

Smiths Falls, ON, Canada | marc.berthelette@gmail.com

linkedin.com/in/marc-berthelette-3aba6917 | Bilingual: French (native), English (fluent) | Eligible to work in Canada | Available immediately

Professional Summary

Senior DevOps and platform engineer with 18 years of experience modernizing delivery practices and helping engineering teams adopt reliable, automated ways of working. Standardized CI/CD for 12 teams and 70+ applications at Energir, built an extensible health and validation platform for approximately 250 enterprise Artifactory repositories at Desjardins, and centralized delivery across 80+ applications at Tink. Deep experience with Jenkins, GitHub Actions, Azure DevOps, observability, automation, technical guidance, and cross-team enablement in regulated environments. Fully bilingual in French and English, with a track record of demystifying complex systems and leading change without formal reporting authority.

Core Expertise

Product-Squad Enablement	Technical guidance, training, mentorship, platform adoption, developer experience, communicating complex concepts
CI/CD and Software Delivery	Jenkins, GitHub Actions, Azure DevOps, pipeline-as-code, release practices, automated quality gates
Observability and Reliability	Dynatrace, Splunk, ELK Stack, dashboards, alerting, root-cause analysis, automated remediation
Platform and Infrastructure Automation	Microsoft Azure, Terraform, Ansible, Kubernetes, Docker, ArgoCD, Puppet
Programming and Systems	Python, FastAPI, Java delivery ecosystems, Bash, Linux, distributed application operations

Work Experience

Energir - Senior DevOps Engineer

Montreal, QC | September 2021 - Present

- Standardized CI/CD across nine runtimes and more than 70 applications for 12 teams, replacing manual delivery with reusable pipelines and built-in quality gates.
- Drove platform adoption outside any reporting line through recurring enablement sessions, technical guidance, and knowledge transfer for all 12 application teams.
- Rebuilt Salesforce delivery with no prior Salesforce experience, replacing legacy ANT scripts and adding a validation pipeline that reduced missed deployment windows from a recurring problem to one since launch.
- Made pipeline failures self-diagnosing by separating application-code errors from platform errors, helping squads identify ownership and resolve failures faster.
- Led modernization of 5-10 mission-critical services on Microsoft Azure using Terraform and Ansible, and built monitoring and automated remediation to improve reliability and recovery.
- Partnered with Enterprise Architecture on resilient, cost-conscious infrastructure and evaluated emerging technologies through proofs of concept.

Key technologies: Microsoft Azure, Azure DevOps, GitHub Actions, Terraform, Ansible, Java, Python, Node.js, Docker, Databricks, CloudFoundry, Salesforce

Desjardins - Senior DevOps Engineer (Contract)

Montreal, QC (Remote) | October 2025 - March 2026 - concurrent engagement delivered alongside the Energir role

- Built a Python/FastAPI service that validated approximately 250 enterprise JFrog Artifactory repositories every four hours and published continuous health signals to Dynatrace.
- Designed the validation engine to be tool-agnostic and configurable, enabling administrator self-service and turning it into the regression-safety net for an enterprise JFrog upgrade.

- Automated on-demand Artifactory environment provisioning with Kubernetes and ArgoCD for safe, repeatable testing.
- Added Splunk alerting for configuration changes made outside the delivery pipeline and implemented artifact lifecycle controls to improve auditability.

Key technologies: Python, FastAPI, JFrog Artifactory, Kubernetes, ArgoCD, GitHub Actions, Dynatrace, Splunk, Docker, Helm

Tink - DevOps Engineer

Montreal, QC | January 2018 - August 2021

- Centralized Jenkins Pipeline as Code across 80+ applications for 20+ clients, standardizing delivery across heterogeneous technology stacks and adding release visibility through Jira.
- Automated patching and kernel-update reboots across 600+ servers using Puppet and Spacewalk, reducing the process to a monthly verification check with near-zero downtime.
- Built centralized ELK logging and reduced on-call interruptions through root-cause analysis, prevention, and self-healing automation.
- Created a fleet-wide internal product exposing CVE, end-of-life software, and SSL/TLS certificate risks to product owners who previously lacked that visibility.

Key technologies: Jenkins, ELK Stack, Puppet, Python, Bash, Linux, Jira, PRTG, Spacewalk, AWS

SOVO Technologies - Lead Technician to Software Engineer

Montreal, QC | November 2008 - December 2017

- Owned company infrastructure, led technicians, and served as the final quality gate before software releases.
- Implemented a redundant architecture that eliminated single points of failure, including a zero-downtime server relocation.
- Wrote production software for approximately seven years, including a production scheduling system and multilingual voice-recognition evaluation tooling.

Key technologies: C++, Java, SQL, Linux, Windows Server, VMware vSphere, networking, backup and recovery

Education

Bachelor of Automated Manufacturing Engineering - Ecole de Technologie Superieure (ETS), Montreal, QC | 2005 - 2016

DCS in Computer Science Technology - Cegep Andre-Laurendeau, Montreal, QC | 2002 - 2005
