

Marc Berthelette

Senior DevOps Engineer | Enterprise CI/CD | Release Automation

Smiths Falls, ON, Canada | Remote | marc.berthelette@gmail.com

linkedin.com/in/marc-berthelette-3aba6917 | Bilingual: French (native), English (fluent) | Available immediately

Professional Summary

Senior DevOps engineer with 18 years across software, systems, cloud infrastructure, and release automation. Standardized CI/CD for 12 teams and 70+ applications at Energir, built continuous validation for approximately 250 enterprise Artifactory repositories at Desjardins, and centralized Jenkins delivery for 80+ applications at Tink. Deep experience with pipeline-as-code, release reliability, Azure, Terraform, Ansible, observability, Linux automation, and developer enablement, complemented by hands-on AWS infrastructure-build experience. Known for turning fragile manual processes into reusable delivery systems with clear diagnostics and quality gates.

Core Expertise

CI/CD and Release Engineering	GitHub Actions, Azure DevOps, Jenkins, pipeline-as-code, quality gates, build and deployment automation
Cloud and Infrastructure	Microsoft Azure, AWS infrastructure, Terraform, Ansible, Puppet, Linux administration
Reliability and Observability	Incident response, root-cause analysis, Dynatrace, Splunk, ELK Stack, automated remediation
Containers and Platforms	Docker, Kubernetes, ArgoCD, JFrog Artifactory, environment automation
Programming and Systems	Python, FastAPI, Bash, Java, C++, SQL, distributed application operations

Work Experience

Energir - Senior DevOps Engineer

Montreal, QC | September 2021 - Present

- Standardized CI/CD across nine runtimes and more than 70 applications for 12 teams, replacing fragile manual delivery with reusable pipelines and built-in quality gates.
- Led modernization of 5-10 mission-critical services on Microsoft Azure and used Terraform and Ansible to standardize dev, staging, and production environments.
- Made pipeline failures self-diagnosing by separating application-code errors from platform errors, reducing false-positive escalations and helping teams resolve failures faster.
- Drove root-cause analysis on critical incidents and built monitoring, dashboards, and automated remediation that reduced Mean Time to Recovery across the application estate.
- Led platform adoption through recurring enablement sessions and knowledge transfer for all 12 application teams.

Key technologies: Microsoft Azure, Azure DevOps, GitHub Actions, Terraform, Ansible, Python, Java, Docker, Databricks, CloudFoundry

Desjardins - Senior DevOps Engineer (Contract)

Montreal, QC (Remote) | October 2025 - March 2026 - concurrent engagement delivered alongside the Energir role

- Built a Python/FastAPI service that validated approximately 250 enterprise JFrog Artifactory repositories every four hours and published continuous health signals to Dynatrace.
- Designed the validation engine to be tool-agnostic and configurable, enabling administrator self-service and turning it into the regression-safety net for an enterprise JFrog upgrade.
- Automated on-demand Artifactory environment provisioning with Kubernetes and ArgoCD for safe, repeatable testing.
- Added Splunk alerting for configuration changes made outside the delivery pipeline and implemented artifact lifecycle controls.

Key technologies: Python, FastAPI, JFrog Artifactory, Kubernetes, ArgoCD, GitHub Actions, Dynatrace, Splunk, Docker, Helm

Tink - DevOps Engineer

Montreal, QC | January 2018 - August 2021

- Centralized Jenkins Pipeline as Code across 80+ applications for 20+ clients, standardizing delivery across heterogeneous technology stacks.
- Automated patching and kernel-update reboots across 600+ servers using Puppet and Spacewalk, reducing the process to a monthly verification check with near-zero downtime.
- Reduced on-call frequency from roughly one page every two rotations to one every four or five through root-cause analysis, prevention, and self-healing automation.
- Built an AWS migration target environment using EC2, S3, Route 53, VPC, caching, and a serverless relational database; the client cancelled the project before production cutover.
- Created a fleet-wide inventory platform exposing CVE, end-of-life software, and certificate risks to product owners.

Key technologies: AWS, Jenkins, Puppet, Python, Bash, Linux, ELK Stack, PRTG, Spacewalk

SOVO Technologies - Lead Technician to Software Engineer

Montreal, QC | November 2008 - December 2017

- Owned company infrastructure and implemented a redundant architecture that eliminated single points of failure, including a zero-downtime server relocation.
- Wrote production software for approximately seven years, including a production scheduling system and multilingual voice-recognition evaluation tooling.

Key technologies: C++, Java, SQL, Linux, Windows Server, VMware vSphere, networking, backup and recovery

Education

Bachelor of Automated Manufacturing Engineering - Ecole de Technologie Superieure (ETS), Montreal, QC | 2005 - 2016

DCS in Computer Science Technology - Cegep Andre-Laurendeau, Montreal, QC | 2002 - 2005
