

Marc Berthelette

Senior DevOps Engineer | Azure Infrastructure Automation | CI/CD

Smiths Falls, ON, Canada | Remote | marc.berthelette@gmail.com

linkedin.com/in/marc-berthelette-3aba6917 | Bilingual: French (native), English (fluent) | Incorporated in Canada | Available immediately

Professional Summary

Senior DevOps and infrastructure-automation engineer with 18 years across software, systems, and production operations. Standardized CI/CD for 12 teams and 70+ applications at Energir, built an extensible Python/FastAPI health platform for approximately 250 enterprise Artifactory repositories at Desjardins, and automated operations across a 600-server fleet at Tink. Deep Microsoft Azure, Terraform, GitHub Actions, CI/CD, Windows and Linux systems, observability, and automation experience, complemented by VMware infrastructure and database-backed application delivery. Known for learning unfamiliar platforms quickly and replacing fragile manual work with repeatable environments and pipelines.

Core Expertise

Azure and Infrastructure Automation	Microsoft Azure, Terraform, Ansible, VMware vSphere, repeatable environments, configuration management
CI/CD and Scripting	GitHub Actions, Azure DevOps, Jenkins, PowerShell environments, Python, Bash, pipeline-as-code
Environment and Release Engineering	Automated provisioning, test environments, quality gates, deployment validation, artifact management
Reliability and Observability	Root-cause analysis, automated remediation, Dynatrace, Splunk, ELK Stack, monitoring and alerting
AI-Assisted Engineering	Scoped AI-assisted development, human-validation checkpoints, controlled promotion, risk awareness
Systems and Data	Windows Server, Linux, SQL, PostgreSQL and MySQL application contexts, backup and recovery

Work Experience

Energir - Senior DevOps Engineer

Montreal, QC | September 2021 - Present

- Standardized CI/CD across nine runtimes and more than 70 applications for 12 teams, replacing fragile manual delivery with reusable pipelines and built-in quality gates.
- Led modernization of 5-10 mission-critical services on Microsoft Azure and used Terraform and Ansible to standardize dev, staging, and production environments.
- Rebuilt Salesforce delivery with no prior Salesforce experience, replacing legacy ANT scripts and adding a sandbox validation pipeline that reduced missed deployment windows from a recurring problem to one since launch.
- Made pipeline failures self-diagnosing by separating application-code errors from platform errors, reducing false-positive escalations and helping teams resolve failures faster.
- Introduced AI-assisted engineering practices with hard scope gates and human-validation checkpoints before generated code reaches production.
- Drove root-cause analysis and built monitoring and automated remediation to improve production recovery.

Key technologies: Microsoft Azure, Azure DevOps, GitHub Actions, Terraform, Ansible, Python, Java, Oracle, Docker, Databricks, CloudFoundry

Desjardins - Senior DevOps Engineer (Contract)

Montreal, QC (Remote) | October 2025 - March 2026 - concurrent engagement delivered alongside the Energir role

- Built a Python/FastAPI service that validated approximately 250 enterprise JFrog Artifactory repositories every four hours and published continuous health signals to Dynatrace.

- Designed the validation engine to be tool-agnostic and configurable, enabling administrator self-service and turning it into the regression-safety net for an enterprise JFrog upgrade.
- Automated on-demand Artifactory environment provisioning with Kubernetes and ArgoCD for safe, repeatable testing.
- Added Splunk alerting for configuration changes made outside the delivery pipeline and implemented artifact lifecycle controls.

Key technologies: Python, FastAPI, JFrog Artifactory, Kubernetes, ArgoCD, GitHub Actions, Dynatrace, Splunk, Docker, Helm

Tink - DevOps Engineer

Montreal, QC | January 2018 - August 2021

- Centralized Jenkins Pipeline as Code across 80+ applications for 20+ clients, standardizing delivery across heterogeneous technology stacks.
- Automated OS patching and kernel-update reboots across 600+ servers using Puppet and Spacewalk, reducing the process to a monthly verification check with near-zero downtime.
- Reduced on-call frequency through root-cause analysis, prevention, and self-healing automation; built centralized ELK logging for production visibility.
- Created a fleet-wide inventory platform exposing CVE, end-of-life software, and SSL/TLS certificate risks to product owners.

Key technologies: Jenkins, Puppet, Python, Bash, Linux, ELK Stack, Jira, PRTG, Spacewalk, AWS

SOVO Technologies - Lead Technician to Software Engineer

Montreal, QC | November 2008 - December 2017

- Owned company infrastructure across Windows Server, Linux, Active Directory, VMware vSphere, networking, backup, and recovery.
- Implemented a redundant architecture that eliminated single points of failure, including a zero-downtime server relocation.
- Wrote production software for approximately seven years, including a production scheduling system and multilingual voice-recognition evaluation tooling.

Key technologies: C++, Java, SQL, Windows Server, Linux, Active Directory, VMware vSphere, networking, backup and recovery

Education

Bachelor of Automated Manufacturing Engineering - Ecole de Technologie Supérieure (ETS), Montreal, QC | 2005 - 2016

DCS in Computer Science Technology - Cegep Andre-Laurendeau, Montreal, QC | 2002 - 2005
