Professional Summary

Senior DevOps and platform engineer with 18 years across software development, infrastructure, and production operations. Standardized CI/CD for 12 teams and 70+ applications at Energir with Azure DevOps and GitHub Actions pipelines, and drove adoption through recurring enablement sessions. Built an extensible Python/FastAPI validation platform for approximately 250 enterprise Artifactory repositories at Desjardins. Deep Microsoft Azure, Terraform, Ansible, scripting, and observability experience in regulated sectors. Known for entering unfamiliar ecosystems, reverse-engineering them, and replacing fragile manual delivery with reusable, well-adopted pipelines.

Core Expertise

CI/CD and Pipeline Engineering	Azure DevOps, GitHub Actions, Jenkins, pipeline-as-code, reusable pipeline templates, quality gates, deployment automation
Infrastructure as Code	Terraform, Ansible, Microsoft Azure, Kubernetes, Docker, ArgoCD
Automation and Scripting	Python, FastAPI, Bash, Java, C++, SQL
Developer Enablement	Standards, documentation, recurring team enablement sessions, platform adoption without formal authority
Observability	Dynatrace, Splunk, ELK Stack, dashboards, alerting, self-diagnosing pipeline reporting

Work Experience

Energir - Senior DevOps Engineer

Montreal, QC | September 2021 - Present

- Standardized CI/CD across nine runtimes (Java, Node.js, Python, Spark, Oracle, CloudFoundry, MuleSoft, Salesforce, Databricks) for 12 application teams and 70+ applications, moving teams from manual deployments to automated pipelines with built-in quality gates.
- Took the Oracle team from fully manual deployment to automated delivery after an earlier attempt by another engineer had failed.
- Rebuilt Salesforce delivery with no prior Salesforce experience: replaced legacy ANT scripts with the official Salesforce CLI and built a sandbox validation pipeline that tests every candidate merge. Missed deployment windows went from a recurring problem to one since launch.
- Separated application-code errors from platform-pipeline errors in reporting, cutting false-positive failures and making build results self-diagnosing.
- Drove CI/CD and platform adoption across 12 teams outside any reporting line, with recurring enablement sessions (about six per year) after each pipeline delivery.
- Used Terraform and Ansible to standardize environment provisioning across dev, staging, and production, and led migration of 5-10 mission-critical services to Microsoft Azure.

Key technologies: Azure DevOps, GitHub Actions, Terraform, Ansible, Microsoft Azure, Python, Docker, Salesforce CLI

Desjardins - Senior DevOps Engineer (Contract)

Montreal, QC (Remote) | October 2025 - March 2026 - concurrent engagement delivered alongside the Energir role

- Built a Python/FastAPI service that validated approximately 250 enterprise JFrog Artifactory repositories every four hours and published health signals to Dynatrace.
- Made the validation engine tool-agnostic and configurable so administrators could add their own test cases; it became the regression-safety net for an enterprise JFrog upgrade.
- Automated on-demand Artifactory environment provisioning with Kubernetes and ArgoCD.
- Added Splunk alerting for configuration changes made outside the delivery pipeline and implemented artifact lifecycle policies.

Key technologies: Python, FastAPI, Kubernetes, ArgoCD, GitHub Actions, JFrog Artifactory, Dynatrace, Splunk

Tink - DevOps Engineer

Montreal, QC | January 2018 - August 2021

- Centralized Jenkins Pipeline as Code across 80+ applications for 20+ clients, standardizing pipeline steps regardless of technology stack and adding visibility through Jira integration.
- Automated OS patching and kernel-update reboots across 600+ servers with Puppet and Spacewalk, reducing the process to a monthly verification check.
- Built a fleet-wide software inventory platform, unprompted, surfacing CVE exposure, end-of-life software, and certificate scoring to product owners.
- Built the compute, caching, database, and network layers of a client's AWS migration target (EC2, S3, Route 53, VPC), provisioned by hand; the client cancelled before cutover.

Key technologies: Jenkins, Puppet, Spacewalk, Python, Bash, ELK Stack, Jira, AWS

SOVO Technologies - Lead Technician to Software Engineer

Montreal, QC | November 2008 - December 2017

- Owned company infrastructure, including a zero-downtime server relocation and redundancy for core servers.
- Wrote production software for about seven years, including a production scheduling system and multilingual voice-recognition evaluation tooling.

Education

Bachelor of Automated Manufacturing Engineering - Ecole de Technologie Superieure (ETS), Montreal, QC | 2005 - 2016

DCS in Computer Science Technology - Cegep Andre-Laurendeau, Montreal, QC | 2002 - 2005
