

Marc Berthelette

Senior DevOps Engineer | Infrastructure Automation | Platform Reliability

Smiths Falls, ON, Canada | Remote | marc.berthelette@gmail.com
linkedin.com/in/marc-berthelette-3aba6917 | Bilingual: French (native), English (fluent) | Available immediately

Professional Summary

Senior DevOps engineer with 18 years across software, systems, infrastructure automation, and production reliability. Standardized CI/CD for 12 teams and 70+ applications at Energir, built continuous health validation for approximately 250 enterprise Artifactory repositories at Desjardins, and automated operations across a 600-server fleet at Tink. Deep Terraform, CI/CD, Kubernetes delivery, Docker, Linux, observability, incident response, and developer-enablement experience, with hands-on Azure and AWS infrastructure work. Known for building scalable automation, improving diagnostics, and turning fragile processes into reliable engineering systems.

Core Expertise

Infrastructure Automation	Terraform, Ansible, Puppet, Microsoft Azure, AWS infrastructure, configuration management
CI/CD and Delivery	GitHub Actions, Azure DevOps, Jenkins, ArgoCD, pipeline-as-code, quality gates
Containers and Systems	Kubernetes, Docker, Linux, Windows Server, environment lifecycle, troubleshooting
Observability and Reliability	Dynatrace, Splunk, ELK Stack, incident response, root-cause analysis, automated remediation
Programming and Scripting	Python, FastAPI, Bash, PowerShell, Java, C++, SQL

Work Experience

Energir - Senior DevOps Engineer

Montreal, QC | September 2021 - Present

- Standardized CI/CD across nine runtimes and more than 70 applications for 12 teams, replacing fragile manual delivery with reusable pipelines and built-in quality gates.
- Led modernization of 5-10 mission-critical services on Microsoft Azure and used Terraform and Ansible to standardize dev, staging, and production environments.
- Drove root-cause analysis on critical incidents and built monitoring, dashboards, and automated remediation that reduced Mean Time to Recovery across the application estate.
- Made pipeline failures self-diagnosing by separating application-code errors from platform errors, reducing false-positive escalations and helping teams resolve failures faster.
- Led platform adoption through recurring enablement sessions and knowledge transfer for all 12 application teams.

Key technologies: Microsoft Azure, Azure DevOps, GitHub Actions, Terraform, Ansible, Python, Java, Docker, Databricks, CloudFoundry

Desjardins - Senior DevOps Engineer (Contract)

Montreal, QC (Remote) | October 2025 - March 2026 - concurrent engagement delivered alongside the Energir role

- Built a Python/FastAPI service that validated approximately 250 enterprise JFrog Artifactory repositories every four hours and published continuous health signals to Dynatrace.
- Designed the validation engine to be tool-agnostic and configurable, enabling administrator self-service and turning it into the regression-safety net for an enterprise JFrog upgrade.
- Automated on-demand Artifactory environment provisioning with Kubernetes and ArgoCD for safe, repeatable testing.
- Added Splunk alerting for configuration changes made outside the delivery pipeline and implemented artifact lifecycle controls.

Key technologies: Python, FastAPI, JFrog Artifactory, Kubernetes, ArgoCD, GitHub Actions, Dynatrace, Splunk, Docker, Helm

Tink - DevOps Engineer

Montreal, QC | January 2018 - August 2021

- Centralized Jenkins Pipeline as Code across 80+ applications for 20+ clients, standardizing delivery across heterogeneous technology stacks.
- Automated patching and kernel-update reboots across 600+ servers using Puppet and Spacewalk, reducing the process to a monthly verification check with near-zero downtime.
- Reduced on-call frequency from roughly one page every two rotations to one every four or five through root-cause analysis, prevention, and self-healing automation.
- Built an AWS migration target environment using EC2, S3, Route 53, VPC, caching, and a serverless relational database; the client cancelled the project before production cutover.
- Created a fleet-wide inventory platform exposing CVE, end-of-life software, and certificate risks to product owners.

Key technologies: AWS, Jenkins, Puppet, Python, Bash, Linux, ELK Stack, PRTG, Spacewalk

SOVO Technologies - Lead Technician to Software Engineer

Montreal, QC | November 2008 - December 2017

- Owned company infrastructure and implemented a redundant architecture that eliminated single points of failure, including a zero-downtime server relocation.
- Wrote production software for approximately seven years, including a production scheduling system and multilingual voice-recognition evaluation tooling.

Key technologies: C++, Java, SQL, Linux, Windows Server, VMware vSphere, networking, backup and recovery

Education

Bachelor of Automated Manufacturing Engineering - Ecole de Technologie Superieure (ETS), Montreal, QC | 2005 - 2016

DCS in Computer Science Technology - Cegep Andre-Laurendeau, Montreal, QC | 2002 - 2005
