Professional Summary

Senior platform and infrastructure engineer with 18 years across Linux systems, software delivery, cloud infrastructure, and production operations. Led Microsoft Azure modernization for mission-critical services and standardized Terraform/Ansible provisioning and CI/CD across 12 teams and 70+ applications at Energir. Builds reliable operating platforms, documentation, monitoring, and automated remediation rather than treating infrastructure as isolated deployment work. Recent financial-services work at Desjardins included an extensible validation platform for approximately 250 enterprise repositories and Kubernetes/ArgoCD environment automation.

Core Expertise

Platform and Infrastructure	Microsoft Azure, Linux, Terraform, Ansible, Puppet, Infrastructure as Code, cloud modernization
Reliability and Operations	Incident response, root cause analysis, automated remediation, 24/7 on-call, runbooks and documentation
CI/CD and Automation	Azure DevOps, GitHub Actions, Jenkins, pipeline-as-code, Python, FastAPI, Bash
Containers and Delivery	Kubernetes, ArgoCD, Docker, JFrog Artifactory, environment automation
Observability	Dynatrace, Splunk, ELK Stack, proactive monitoring, dashboards and alerting

Work Experience

Energir - Senior DevOps Engineer

Montreal, QC | September 2021 - Present

- Led cloud modernization for 5-10 mission-critical services on Microsoft Azure, partnering with Enterprise Architecture on resilient, cost-optimized infrastructure aligned with cloud-native and zero-trust principles.
- Used Terraform and Ansible to standardize provisioning across development, staging, and production environments and reduce configuration drift.
- Standardized CI/CD across nine runtimes for 12 application teams and 70+ applications using Azure DevOps and GitHub Actions with built-in quality gates.
- Drove root cause analysis on critical incidents and implemented proactive monitoring, dashboards, and automated remediation to improve reliability and reduce Mean Time to Recovery (MTTR).
- Separated application-code failures from platform-pipeline failures, making build results self-diagnosing and reducing false-positive pipeline failures.
- Led platform adoption across 12 teams outside any reporting line through recurring enablement sessions and technical documentation after delivery.

Key technologies: Microsoft Azure, Terraform, Ansible, Azure DevOps, GitHub Actions, Python, Docker, Linux, ServiceNow

Desjardins - Senior DevOps Engineer (Contract)

Montreal, QC (Remote) | October 2025 - March 2026 - concurrent engagement delivered alongside the Energir role

- Built a Python/FastAPI service that validated approximately 250 enterprise JFrog Artifactory repositories every four hours and published health signals to Dynatrace.
- Made the validation engine tool-agnostic and configurable so administrators could add their own tests; it became the regression-safety net for an enterprise JFrog upgrade.
- Automated on-demand test-environment provisioning with Kubernetes and ArgoCD.
- Added Splunk alerting for configuration changes made outside the delivery pipeline and implemented artifact lifecycle policies.

Key technologies: Python, FastAPI, Kubernetes, ArgoCD, GitHub Actions, JFrog Artifactory, Dynatrace, Splunk

Tink - DevOps Engineer

Montreal, QC | January 2018 - August 2021

- Automated OS patching and kernel-update reboots across more than 600 Linux servers using Puppet and Spacewalk, reducing the process to a monthly verification check with near-zero downtime.
- Participated in a 24/7 on-call rotation and reduced repeat incidents through root-cause analysis and prevention; automated recovery of an unstable Elasticsearch cluster so known failures no longer required a human response.
- Centralized Jenkins Pipeline as Code across 80+ applications for 20+ clients and implemented centralized ELK log aggregation for production visibility.
- Conceived and built a fleet-wide software inventory platform that exposed CVE risk, end-of-life software, and certificate scoring to product owners.
- Built the compute, caching, database, and network layers of a client's AWS migration target using EC2, S3, Route 53, and VPC; provisioned by hand, with the project cancelled before cutover.

Key technologies: Linux, Jenkins, Puppet, Spacewalk, Bash, ELK Stack, Jira, AWS, infrastructure automation

SOVO Technologies - Lead Technician to Software Engineer

Montreal, QC | November 2008 - December 2017

- Owned company infrastructure, including a zero-downtime server relocation and redundant core services, while managing and training a team of technicians.
- Wrote production software for approximately seven years, including a production scheduling system and multilingual voice-recognition evaluation tooling.

Education

Bachelor of Automated Manufacturing Engineering - Ecole de Technologie Supérieure (ETS), Montreal, QC | 2005 - 2016

DCS in Computer Science Technology - Cegep Andre-Laurendeau, Montreal, QC | 2002 - 2005
