Professional Summary

Senior Azure and DevOps engineer with 18 years across infrastructure, software delivery, integration, and production operations. Led Microsoft Azure modernization for mission-critical services and standardized Terraform/Ansible provisioning and CI/CD across 12 teams and 70+ applications at Energir, including MuleSoft, Salesforce, Data Lake, Oracle, Java, Python, and Databricks delivery. Partners effectively with enterprise architecture and application teams to turn resilient cloud designs into reusable, adopted delivery capabilities. Recent financial-services work at Desjardins included an extensible validation platform for approximately 250 enterprise repositories.

Core Expertise

Azure and Cloud Architecture	Microsoft Azure, cloud modernization, resilient infrastructure, zero-trust alignment, cost optimization
DevOps and Infrastructure as Code	Terraform, Ansible, Azure DevOps, GitHub Actions, Jenkins, CI/CD, pipeline-as-code
Enterprise Integration	MuleSoft delivery, Salesforce, Data Lake, APIs, Python, FastAPI, Java, SQL
Containers and Reliability	Kubernetes, ArgoCD, Docker, incident response, root cause analysis, automated remediation
Observability and Enablement	Dynatrace, Splunk, ELK Stack, technical standards, cross-team enablement, ServiceNow

Work Experience

Energir - Senior DevOps Engineer

Montreal, QC | September 2021 - Present

- Led cloud modernization for 5-10 mission-critical services on Microsoft Azure, partnering with Enterprise Architecture on resilient, cost-optimized infrastructure aligned with cloud-native and zero-trust principles.
- Used Terraform and Ansible to standardize provisioning across development, staging, and production environments and reduce configuration drift.
- Standardized CI/CD across nine runtimes for 12 application teams and 70+ applications using Azure DevOps and GitHub Actions with built-in quality gates; supported MuleSoft, Salesforce, Data Lake, Oracle, Java, Python, Spark, CloudFoundry, and Databricks delivery.
- Rebuilt Salesforce delivery by replacing legacy ANT scripts with the official Salesforce CLI and adding a sandbox validation pipeline for every candidate merge; missed deployment windows fell from a recurring problem to one since launch.
- Orchestrated integration between Salesforce and enterprise Data Lake platforms, enabling secure, automated data pipelines.
- Led platform adoption across 12 teams outside any reporting line through recurring enablement sessions after delivery.
- Drove root cause analysis on critical incidents and implemented monitoring, dashboards, and automated remediation to improve reliability and reduce Mean Time to Recovery (MTTR).

Key technologies: Microsoft Azure, Azure DevOps, GitHub Actions, Terraform, Ansible, MuleSoft, Salesforce, Data Lake, Python, Docker, ServiceNow

Desjardins - Senior DevOps Engineer (Contract)

Montreal, QC (Remote) | October 2025 - March 2026 - concurrent engagement delivered alongside the Energir role

- Built a Python/FastAPI service that validated approximately 250 enterprise JFrog Artifactory repositories every four hours and published health signals to Dynatrace.

- Made the validation engine tool-agnostic and configurable so administrators could add their own tests; it became the regression-safety net for an enterprise JFrog upgrade.
- Automated on-demand test-environment provisioning with Kubernetes and ArgoCD.
- Added Splunk alerting for configuration changes made outside the delivery pipeline and implemented artifact lifecycle policies.

Key technologies: Python, FastAPI, Kubernetes, ArgoCD, GitHub Actions, JFrog Artifactory, Dynatrace, Splunk

Tink - DevOps Engineer

Montreal, QC | January 2018 - August 2021

- Centralized Jenkins Pipeline as Code across 80+ applications for 20+ clients, standardizing delivery steps across technology stacks and adding release visibility through Jira.
- Automated OS patching and kernel-update reboots across 600+ servers using Puppet and Spacewalk, reducing the process to a monthly verification check with near-zero downtime.
- Conceived and built a fleet-wide software inventory platform that exposed CVE risk, end-of-life software, and certificate scoring to product owners.
- Built the compute, caching, database, and network layers of a client's AWS migration target using EC2, S3, Route 53, and VPC; provisioned by hand, with the project cancelled before cutover.

Key technologies: Jenkins, Puppet, Spacewalk, Bash, Linux, ELK Stack, Jira, AWS, infrastructure automation

SOVO Technologies - Lead Technician to Software Engineer

Montreal, QC | November 2008 - December 2017

- Owned company infrastructure, including a zero-downtime server relocation and redundant core services, while managing and training a team of technicians.
- Wrote production software for approximately seven years, including a production scheduling system and multilingual voice-recognition evaluation tooling.

Education

Bachelor of Automated Manufacturing Engineering - Ecole de Technologie Supérieure (ETS), Montreal, QC | 2005 - 2016

DCS in Computer Science Technology - Cegep Andre-Laurendeau, Montreal, QC | 2002 - 2005
