Blackpoint Cyber

Re: Senior Site Reliability Engineer

Dear Blackpoint Cyber hiring team,

I am applying for the Senior Site Reliability Engineer role. Designing and maintaining reliable infrastructure through disciplined Infrastructure as Code, supporting incident response, and partnering with engineering teams to keep systems performant is work I already do daily.

At Énergir, I led cloud modernization migrating several mission-critical services to Microsoft Azure, implementing Terraform and Ansible IaC practices that standardized environment provisioning and eliminated configuration drift across dev, staging, and production. At Desjardins, I automated on-demand environment provisioning using Kubernetes and ArgoCD, and built Splunk-based alerting to catch operational issues before they became incidents. Across both roles, I drive root-cause analysis and build the monitoring, dashboards, and automated remediation that reduce MTTR.

I want to be direct about the fit here, because your posting is specifically AWS-native infrastructure ownership at production scale, and my strongest current production cloud depth is Azure. My hands-on AWS experience is real — at Tink, I built the compute, caching, and database layers of a client's full AWS migration target environment (EC2, S3, Route 53, self-managed memcached, a serverless relational database) with no prior AWS experience — but that engagement was cancelled before cutover, never reached production, and was provisioned by hand rather than with Terraform. I also don't have hands-on production experience with Kafka, Confluent Cloud, Redis, Istio, or feature-flag platforms like LaunchDarkly, all of which your posting lists as core to the role.

What I do bring is 18 years of learning unfamiliar platforms cold under a delivery deadline and making them dependable — including that AWS build itself — plus current, deep Terraform/IaC discipline and Kubernetes automation experience that transfers directly to the operational rigor this role demands. I'd rather lay out exactly where the gaps are than have them surface as a surprise in a technical interview.

I am based near Ottawa, fully bilingual in English and French, and available to work remotely.

Sincerely,

Marc Berthelette
