Professional Summary

Senior site reliability and infrastructure engineer with 18 years of experience designing and maintaining production infrastructure through disciplined Infrastructure as Code. Led Azure cloud modernization and Terraform/Ansible standardization at Énergir; automated Kubernetes/ArgoCD environment provisioning at Desjardins. Direct, hands-on AWS build experience from Tink — EC2, S3, Route 53, VPC, self-managed caching, and a serverless relational database, built with no prior AWS experience. Drives root-cause analysis, MTTR reduction, and proactive monitoring across regulated production environments. Learns unfamiliar platforms cold under a delivery deadline and consistently delivers the structurally larger automation the problem actually needed.

Technical Skills

Infrastructure as Code	Terraform, Ansible, Puppet, automated resource provisioning, configuration-drift elimination
Containers & Orchestration	Kubernetes, Docker, ArgoCD
Cloud Platforms	Microsoft Azure (production, 5–10 service migrations led), AWS (EC2, S3, Route 53, VPC — hands-on build, non-production, see Work Experience)
Site Reliability Engineering	Root-cause analysis, MTTR reduction, incident response, proactive monitoring, automated remediation, on-call rotation
Observability	Dynatrace, Splunk, ELK Stack, dashboards, alerting
CI/CD	Azure DevOps, GitHub Actions, Jenkins Pipeline as Code
Programming & Automation	Python, FastAPI, Bash, Java, SQL, NoSQL

Work Experience

Énergir — Senior DevOps Engineer

Montréal, QC | September 2021 – Present

- Led cloud modernization migrating several mission-critical services to Microsoft Azure, implementing Terraform and Ansible IaC practices that standardized environment provisioning and eliminated configuration drift across dev, staging, and production.
- Drove root-cause analysis on critical production incidents and built proactive monitoring, dashboards, alerts, and automated remediation that reduced MTTR across 12 application teams and 70+ applications.
- Standardized CI/CD delivery across nine distinct runtimes, entering most ecosystems with no prior experience and reverse-engineering each before automating it.

Key technologies: Microsoft Azure, Terraform, Ansible, Python, Dynatrace, Splunk, Azure DevOps, GitHub Actions

Desjardins — Senior DevOps Engineer (Contract)

Montréal, QC (Remote) | October 2025 – March 2026 — *concurrent engagement alongside the Énergir role*

- Automated provisioning of on-demand Artifactory environments using Kubernetes and ArgoCD, giving administrators repeatable, isolated environments for safely testing configuration changes and upgrades.
- Built Splunk alerting to detect manual configuration changes made outside the CI/CD pipeline, improving auditability and catching issues before they became incidents.
- Designed and built a Python/FastAPI service that tested the configuration of ~250 enterprise Artifactory repositories every 4 hours and published results to Dynatrace.

Key technologies: Kubernetes, ArgoCD, Python, FastAPI, Dynatrace, Splunk, Docker, Helm

Tink — DevOps Engineer

Montréal, QC | January 2018 – August 2021

- Built the compute, caching, and database layers of a client's full AWS migration target environment — EC2, S3, Route 53, self-managed memcached on EC2, and a serverless relational database — and contributed to VPC/network and Route 53 design, with no prior AWS experience. Roughly 6 months of work; resources were provisioned by hand in the AWS console, not through Terraform or CloudFormation; the client cancelled the migration before cutover.
- Centralized Jenkins Pipeline as Code across a team of 10–15 developers maintaining 80+ applications for 20+ clients.
- Managed fleet configuration as code via Puppet and Spacewalk across 600+ servers; built centralized log aggregation using the ELK Stack.
- Built a self-healing response for a recurring, unstable Elasticsearch cluster, automating remediation so a known failure mode no longer required a human page.

Key technologies: AWS (EC2, S3, Route 53, VPC), Jenkins, Puppet, Spacewalk, ELK Stack, Bash

SOVO Technologies — Lead Technician to Software Engineer

Montréal, QC | November 2008 – December 2017

- Owned company IT infrastructure, delivered a zero-downtime server relocation, and introduced redundancy that eliminated single points of failure.
- Wrote production software for approximately seven years before the title formalized it.

Key technologies: C++, Java, SQL, Windows Server, VMware vSphere, Active Directory

Education

Bachelor of Automated Manufacturing Engineering — École de Technologie Supérieure, Montréal, QC | 2005 – 2016

DCS in Computer Science Technology — Cégep André-Laurendeau, Montréal, QC | 2002 – 2005
