Professional Summary

Senior engineer with 18 years of experience owning technical implementations end to end and turning a narrow ask into a reusable platform. Rebuilt Salesforce delivery and orchestrated Salesforce/Data Lake integration at Énergir; built a tool-agnostic validation harness at Desjardins that became the regression safety net for an enterprise platform upgrade; built an unprompted, fleet-wide inventory platform at Tink. Introduced scoped, human-validated AI-assisted engineering practices into production delivery — the same AI-native discipline this role expects. Strong SQL and data-migration instincts from real production integration work, and a demonstrated record of translating what a stakeholder actually needs into working configuration and code.

Technical Skills

Data Integration & Migration	Salesforce/Data Lake orchestration, cross-system data pipelines, configuration-driven validation harnesses
AI-Assisted Engineering	Scoped/gated AI-assisted development, human-validation checkpoints, production-promotion controls
Customer & Stakeholder Enablement	Cross-team enablement outside any reporting line, technical documentation, translating operational needs into system configuration
Programming & Automation	Python, FastAPI, Bash, Java, SQL, NoSQL
CI/CD & Delivery	Salesforce CLI, Azure DevOps, GitHub Actions, Jenkins Pipeline as Code
Cloud & Infrastructure	Microsoft Azure, Terraform, Ansible, Kubernetes, ArgoCD
Observability	Dynatrace, Splunk, ELK Stack

Work Experience

Énergir — Senior DevOps Engineer

Montréal, QC | September 2021 – Present

- Rebuilt Salesforce delivery with no prior Salesforce experience — replaced legacy ANT deployment scripts with the official Salesforce CLI tooling and built a validation pipeline testing every candidate merge in a sandbox, cutting missed deployment windows from a recurring problem to a single miss since launch.
- Orchestrated integration between Salesforce and enterprise Data Lake platforms, enabling secure, automated data pipelines supporting data-driven decision-making at scale.
- Standardized CI/CD delivery across nine distinct runtimes including MuleSoft, for 12 application teams and 70+ applications, entering most ecosystems with no prior experience.
- Introduced AI-assisted engineering practices with researched scope gates and human-validation checkpoints before any AI-generated code reaches production.
- Drove CI/CD and platform-engineering adoption across 12 teams outside any reporting line through recurring enablement sessions.

Key technologies: Salesforce, MuleSoft, Data Lake, Microsoft Azure, Python, Terraform, Ansible

Desjardins — Senior DevOps Engineer (Contract)

Montréal, QC (Remote) | October 2025 – March 2026 — *concurrent engagement alongside the Énergir role*

- Extended an engagement to verify configuration of ~250 enterprise Artifactory repositories into a tool-agnostic, configurable validation harness — the same harness then de-risked the enterprise platform's own version upgrade.
- Designed and built a Python/FastAPI service that tested repository health every 4 hours and published results to Dynatrace.
- Automated provisioning of on-demand environments using Kubernetes and ArgoCD.

Key technologies: Python, FastAPI, JFrog Artifactory, Kubernetes, ArgoCD, Dynatrace

Tink — DevOps Engineer

Montréal, QC | January 2018 – August 2021

- Conceived and built, unprompted and outside any assigned scope, a software inventory platform cataloguing every installed application and version across a 600+ server fleet — surfacing CVE exposure, end-of-life software, and SSL/TLS certificate scoring to product owners who previously had no such visibility.
- Built the compute, caching, and database layers of a client's full AWS migration target environment — EC2, S3, Route 53, self-managed memcached, serverless relational database — with no prior AWS experience; the client cancelled the migration before cutover.
- Centralized Jenkins Pipeline as Code across a team of 10–15 developers maintaining 80+ applications for 20+ clients.

Key technologies: AWS (EC2, S3, Route 53, VPC), Jenkins, ELK Stack, Bash, SQL

SOVO Technologies — Lead Technician to Software Engineer

Montréal, QC | November 2008 – December 2017

- Wrote production software for approximately seven years before the title formalized it: a production scheduling system, then a voice recognition evaluation system and multi-language dictionary infrastructure.
- Owned company IT infrastructure and served as the final QA gate before production releases.

Key technologies: C++, Java, SQL, Windows Server

Education

Bachelor of Automated Manufacturing Engineering — École de Technologie Supérieure, Montréal, QC | 2005 – 2016

DCS in Computer Science Technology — Cégep André-Laurendeau, Montréal, QC | 2002 – 2005
