Professional Summary

Senior engineer with 18 years of experience building platforms nobody asked for and turning ambiguous problems into durable, reusable capability. Conceived and built an unprompted, fleet-wide software inventory platform at Tink; repeatedly turned a narrow ask into a structurally larger delivery at Énergir and Desjardins. Introduced scoped, human-validated AI-assisted engineering practices into production delivery — researching and applying hard scope gates before any AI-generated code ships. Comfortable owning a problem from discovery to production with no pre-written playbook, and translating customer-facing complexity into platform-level automation.

Technical Skills

Zero-to-One Platform Building	Unprompted platform creation, playbook definition, ambiguity tolerance, full-lifecycle ownership
AI-Assisted Engineering	Scoped/gated AI-assisted development, human-validation checkpoints, production-promotion controls
Systems Architecture	Microsoft Azure (production, 5–10 service migrations led), AWS (hands-on build, see Work Experience), Kubernetes, ArgoCD
Customer & Stakeholder Translation	Cross-team enablement outside any reporting line, technical documentation, requirements-to-configuration translation
Programming & Automation	Python, FastAPI, Bash, Java, SQL, NoSQL
Infrastructure as Code & CI/CD	Terraform, Ansible, Azure DevOps, GitHub Actions, Jenkins Pipeline as Code

Work Experience

Énergir — Senior DevOps Engineer

Montréal, QC | September 2021 – Present

- Introduced AI-assisted engineering practices into the team's tooling over the past 6–9 months, researching and applying hard scope gates and human-validation checkpoints before any AI-generated code reaches production; flagged to leadership that the organization has no equivalent organizational safeguards.
- Rebuilt Salesforce delivery with no prior Salesforce experience — replaced legacy ANT scripts with the official Salesforce CLI tooling and built a validation pipeline testing every candidate merge, cutting missed deployment windows from a recurring problem to a single miss since launch.
- Led cloud modernization migrating several mission-critical services to Microsoft Azure, implementing Terraform and Ansible IaC practices.
- Drove CI/CD and platform-engineering adoption across 12 teams outside any reporting line through recurring enablement sessions.

Key technologies: Microsoft Azure, Terraform, Ansible, Python, Salesforce, Azure DevOps, GitHub Actions

Desjardins — Senior DevOps Engineer (Contract)

Montréal, QC (Remote) | October 2025 – March 2026 — *concurrent engagement alongside the Énergir role*

- Extended an engagement to verify repository configuration into a tool-agnostic, configurable validation harness that then de-risked the enterprise platform's own version upgrade.
- Designed and built a Python/FastAPI service that tested the health of ~250 enterprise Artifactory repositories every 4 hours, publishing telemetry to Dynatrace.
- Automated provisioning of on-demand environments using Kubernetes and ArgoCD.

Key technologies: Python, FastAPI, JFrog Artifactory, Kubernetes, ArgoCD, Dynatrace

Tink — DevOps Engineer

Montréal, QC | January 2018 – August 2021

- Conceived and built, unprompted and outside any assigned scope, a software inventory platform cataloguing every installed application and version across a 600+ server fleet — surfacing CVE exposure, end-of-life software, and SSL/TLS certificate scoring to product owners who previously had no such visibility.
- Built the compute, caching, and database layers of a client's full AWS migration target environment — EC2, S3, Route 53, self-managed memcached, serverless relational database — with no prior AWS experience; the client cancelled the migration before cutover.
- Centralized Jenkins Pipeline as Code across a team of 10–15 developers maintaining 80+ applications for 20+ clients.

Key technologies: AWS (EC2, S3, Route 53, VPC), Jenkins, ELK Stack, Bash, CVE/vulnerability tracking

SOVO Technologies — Lead Technician to Software Engineer

Montréal, QC | November 2008 – December 2017

- Wrote production software for approximately seven years before the title formalized it: a production scheduling system, then a voice recognition evaluation system and multi-language dictionary infrastructure.
- Owned company IT infrastructure and served as the final QA gate before production releases.

Key technologies: C++, Java, SQL, Windows Server

Education

Bachelor of Automated Manufacturing Engineering — École de Technologie Supérieure, Montréal, QC | 2005 – 2016

DCS in Computer Science Technology — Cégep André-Laurendeau, Montréal, QC | 2002 – 2005
