

Dear Borrowwell Hiring Team,

I'm applying for the Sr. DevOps Engineer role supporting your marketplace infrastructure. I've spent the last several years as the person organizations bring in when a piece of critical infrastructure needs to move onto Azure and stay reliable once it's there — and that's exactly the shape of what you're describing: Terraform-driven infrastructure as code, Azure DevOps pipelines, and a security- and networking-literate approach to a production system that real people depend on.

At Énergir, I led cloud modernization work migrating several mission-critical services onto Microsoft Azure, building the Terraform and Ansible IaC that eliminated configuration drift across dev, staging, and production. I also standardized CI/CD delivery for 12 application teams across nine different runtimes — entering most of them with no prior experience, reverse-engineering how they actually worked, then automating what I found. That pattern of taking a narrower ask and delivering the more durable fix underneath it is consistent across my career: at Tink, nobody asked me to build a fleet-wide software inventory platform that surfaced CVE exposure and SSL/TLS risk to product owners — I built it anyway because the visibility gap was the real problem. I bring the same instinct to infrastructure work: fix the root cause, not just the symptom in front of you.

Your posting's mix of Terraform module development, Bash automation, Docker, and troubleshooting distributed microservices maps directly onto day-to-day work I've done recently — including a Desjardins engagement where I built a Python/FastAPI service that continuously validated ~250 Artifactory repositories and fed results into Dynatrace, extending well past its original scope because I made the validation logic reusable rather than one-off. I understand the trust a fintech platform requires from its infrastructure, having done comparable work in regulated financial-services and energy environments.

I'd welcome the chance to talk about how this experience applies to Borrowwell's marketplace platform. Thank you for your consideration.

Sincerely, Marc Berthelette
