

Dear CANARIE Hiring Team,

I'm writing to apply for the Senior Platform Engineering Specialist role. CANARIE's mandate — connecting Canada's research and education community through resilient national infrastructure — is exactly the kind of mission-driven, high-availability platform work I've built my career around.

At Énergir, I standardized CI/CD delivery for 12 application teams across nine distinct runtimes, entering most of them with no prior experience and reverse-engineering how each one actually worked before automating it. I led cloud modernization work migrating several mission-critical services onto Microsoft Azure, building Terraform and Ansible infrastructure as code that eliminated configuration drift across environments, and drove the root-cause analysis and automated remediation practices that reduced MTTR across the application estate. I also ran recurring enablement sessions with each application team after delivering pipeline tooling — turning delivered automation into real adoption rather than shelfware, the same cross-organizational credibility-building this role asks for. At Desjardins, I automated on-demand infrastructure provisioning using Kubernetes and ArgoCD, and built a Python-based validation service that tested ~250 Artifactory repositories continuously, publishing results to Dynatrace.

I want to be direct about two platforms named in the posting that I haven't worked with specifically: Rancher and OpenShift. My Kubernetes and container-orchestration experience is real and current — through ArgoCD-driven Kubernetes provisioning at Desjardins — but not on these particular distributions. I do have private-cloud VMware vSphere experience from earlier in my career. Where I'm confident I add value regardless of the specific tooling is the pattern underneath it: learning an unfamiliar platform cold under a delivery deadline, which I've done repeatedly — Salesforce and Kubernetes at Énergir and Desjardins, and a full AWS build environment at an earlier employer with no prior AWS experience.

I'd welcome the opportunity to discuss how this experience applies to CANARIE's platform. Thank you for your consideration.

Sincerely, Marc Berthelette
