Professional Summary

Senior DevOps engineer with deep Microsoft Azure, Terraform, and infrastructure-as-code practice, who takes ownership of production cloud environments other people are hesitant to touch — learning them cold under a delivery deadline, then replacing manual and fragile processes with automation that holds. Led Azure cloud modernization at Énergir, migrating mission-critical services with Terraform and Ansible IaC that eliminated configuration drift across dev, staging, and production. The differentiator is judgment, not tool count: fixes root causes instead of patching over them, and recommends the right answer rather than the cheapest one.

Core Expertise

Infrastructure & Cloud Automation	Microsoft Azure, Terraform, Ansible, Kubernetes, Docker, ArgoCD
CI/CD & Artifact Management	Azure DevOps, GitHub Actions, Jenkins, JFrog Artifactory, Nexus, CloudFoundry
Platform Engineering & Enablement	CI/CD standardization across heterogeneous stacks, pipeline-as-code, cross-team enablement without reporting authority
Reliability & Production Engineering	Root cause analysis, MTTR reduction, proactive monitoring & alerting, incident response, automated remediation
Observability	Dynatrace, Splunk, ELK Stack (Elasticsearch, Logstash, Kibana)
Programming & Systems	Python, FastAPI, Bash, C++, Java, SQL, NoSQL, Red Hat Linux, Ubuntu, Apache, Nginx

Work Experience

Énergir — Senior DevOps Engineer

Montréal, QC | September 2021 – Present

- Led cloud modernization migrating 5–10 mission-critical services to Microsoft Azure, implementing Terraform and Ansible IaC practices that standardized environment provisioning and eliminated configuration drift across dev, staging, and production.
- Owned CI/CD standardization for 12 application teams and 70+ applications across nine distinct runtimes — Java, Node.js, Python, Spark, Oracle, CloudFoundry, MuleSoft, Salesforce, and Databricks — entering most of those ecosystems with no prior experience.
- Drove root cause analysis on critical production incidents and built the proactive monitoring, dashboards, and automated remediation that reduced Mean Time to Recovery (MTTR) across the application estate.
- Cut false-positive pipeline failures by separating application-code errors from platform-pipeline errors in reporting.

Key technologies: Microsoft Azure, Azure DevOps, GitHub Actions, Terraform, Ansible, Java, Node.js, Python, Spark, Oracle, CloudFoundry, MuleSoft, Salesforce, Databricks, IaC

Desjardins — Senior DevOps Engineer (Contract)

Montréal, QC (Remote) | October 2025 – March 2026 — *concurrent engagement, delivered alongside the Énergir role*

- Delivered a 6-month engagement hardening the enterprise JFrog Artifactory platform, building a Python/FastAPI service that tested the configuration of ~250 remote repositories across seven package ecosystems every 4 hours, publishing to Dynatrace.
- Automated provisioning of on-demand Artifactory instances with Kubernetes and ArgoCD, letting administrators spin up fully configured environments for safe testing.
- Extended the engagement past its original scope by building the validation logic tool-agnostic and the test set configurable; the same harness then de-risked the enterprise JFrog version upgrade.

Key technologies: JFrog Artifactory, Python, FastAPI, Kubernetes, ArgoCD, GitHub Actions, Dynatrace, Splunk, Docker, Helm

Tink — DevOps Engineer

Montréal, QC | January 2018 – August 2021

- Centralized Jenkins Pipeline as Code across a team of 10–15 developers maintaining 80+ applications for 20+ clients, standardizing pipeline steps across tech stacks.
- Built the compute, caching, and database layers of a client's AWS migration target environment — EC2, S3, Route 53, VPC, self-managed memcached, serverless database — with no prior AWS experience; the client cancelled before cutover.
- Automated OS-level patching across 600+ servers, reducing it to a monthly verification check with near-zero downtime, fleet configuration driven declaratively through Puppet and Spacewalk.

Key technologies: Jenkins, ELK Stack, Bash, Linux, Puppet, Spacewalk, AWS (EC2, S3, Route 53, VPC)

SOVO Technologies — Lead Technician → Software Engineer

Montréal, QC | November 2008 – December 2017

- Owned all company IT infrastructure — including a zero-downtime server relocation and a redundant architecture that eliminated single points of failure — while managing a team of technicians.
- Wrote production software alongside infrastructure work for roughly seven years before the title formalized it.

Key technologies: C++, Java, SQL, Windows Server, Linux, Active Directory, VMware vSphere, Cisco routing, firewall/VPN

Education

Bachelor of Automated Manufacturing Engineering — École de Technologie Supérieure (ÉTS), Montréal, QC | 2005 – 2016

DCS in Computer Science Technology — Cégep André-Laurendeau, Montréal, QC | 2002 – 2005
