Professional Summary

Senior DevOps engineer who introduced disciplined, scoped AI-assisted engineering practices into a production organization — hard scope gates and human-validation checkpoints before any AI-generated code ships — and takes ownership of production systems other people are hesitant to touch, learning them cold under a delivery deadline. Given a narrow scope three times, at three employers, over eight years, and each time delivered something structurally larger than what was asked. Deep Terraform, Kubernetes, and CI/CD practice, with hands-on AWS build experience alongside Microsoft Azure depth.

Core Expertise

AI-Assisted Engineering	Scoped/gated AI-assisted development, human-validation checkpoints, risk assessment of generated-code promotion
Platform Engineering & Enablement	CI/CD standardization across heterogeneous stacks, pipeline-as-code, cross-team enablement without reporting authority
Infrastructure & Cloud Automation	Terraform, Ansible, Kubernetes, Docker, ArgoCD, Microsoft Azure
Reliability & Production Engineering	Root cause analysis, MTTR reduction, incident response, automated remediation, 24/7 on-call
CI/CD & Artifact Management	GitHub Actions, Azure DevOps, Jenkins, JFrog Artifactory
Programming & Systems	Python, FastAPI, Bash, C++, Java, SQL, NoSQL, Red Hat Linux

Work Experience

Énergir — Senior DevOps Engineer

Montréal, QC | September 2021 – Present

- Introduced AI-assisted engineering practices over the past 6–9 months with researched scope gates and human-validation checkpoints before any AI-generated code ships — and flagged to leadership that the organization has no equivalent safeguards.
- Owned CI/CD standardization for 12 application teams and 70+ applications across nine distinct runtimes, entering most of those ecosystems with no prior experience.
- Drove root cause analysis on critical production incidents and built the proactive monitoring, dashboards, and automated remediation that reduced MTTR across the application estate.
- Led cloud modernization migrating 5–10 mission-critical services to Microsoft Azure with Terraform/Ansible IaC.

Key technologies: Terraform, Ansible, Microsoft Azure, Azure DevOps, GitHub Actions, Python, IaC

Desjardins — Senior DevOps Engineer (Contract)

Montréal, QC (Remote) | October 2025 – March 2026 — *concurrent engagement, delivered alongside the Énergir role*

- Automated provisioning of on-demand Artifactory instances using Kubernetes and ArgoCD, letting administrators spin up fully configured self-service environments for safe testing.
- Delivered a 6-month engagement hardening the enterprise JFrog Artifactory platform, building a Python/FastAPI service — made tool-agnostic and configurable so administrators could reuse it — that tested ~250 remote repositories every 4 hours, publishing to Dynatrace.

Key technologies: Kubernetes, ArgoCD, JFrog Artifactory, Python, FastAPI, GitHub Actions, Dynatrace, Docker, Helm

Tink — DevOps Engineer

Montréal, QC | January 2018 – August 2021

- Built the compute, caching, and database layers of a client's AWS migration target environment — EC2, S3, Route 53, VPC, self-managed memcached, serverless database — with no prior AWS experience; the client cancelled before cutover.
- Centralized Jenkins Pipeline as Code across a team of 10–15 developers maintaining 80+ applications for 20+ clients.
- Conceived and built, unprompted, a software inventory platform cataloguing every application and version across a 600+ server fleet, surfacing CVE exposure and SSL/TLS certificate scoring to product owners.

Key technologies: AWS (EC2, S3, Route 53, VPC), Jenkins, ELK Stack, Bash, Linux, Puppet

SOVO Technologies — Lead Technician → Software Engineer

Montréal, QC | November 2008 – December 2017

- Owned all company IT infrastructure, including a zero-downtime server relocation and a redundant architecture eliminating single points of failure.
- Wrote production software alongside infrastructure work for roughly seven years before the title formalized it.

Key technologies: C++, Java, SQL, Windows Server, Linux, Active Directory, VMware vSphere

Education

Bachelor of Automated Manufacturing Engineering — École de Technologie Supérieure (ÉTS), Montréal, QC | 2005 – 2016

DCS in Computer Science Technology — Cégep André-Laurendeau, Montréal, QC | 2002 – 2005
