Professional Summary

Senior infrastructure engineer with real team-leadership experience — managed a team of technicians (scheduling, training, task delegation) at SOVO Technologies while owning company-wide IT infrastructure — paired with deep hands-on server-fleet automation from Puppet-driven configuration management of 600+ servers at Tink. Deep Microsoft Azure and AWS build experience, Terraform, and Linux/Windows systems administration.

Core Expertise

Infrastructure & Cloud Automation	Microsoft Azure, AWS, Terraform, Ansible, Puppet, Kubernetes, Docker
Systems Administration	Windows Server, Linux (Red Hat, CentOS, RockyOS, Ubuntu), Active Directory, VMware vSphere
CI/CD & Artifact Management	Azure DevOps, GitHub Actions, Jenkins
Reliability & Production Engineering	Root cause analysis, MTTR reduction, incident response, automated remediation, 24/7 on-call
Programming & Systems	Python, FastAPI, Bash, C++, Java, SQL, NoSQL

Work Experience

SOVO Technologies — Lead Technician → Software Engineer

Montréal, QC | November 2008 – December 2017

- Managed a team of technicians: scheduling, training, and task delegation.
- Owned all company IT infrastructure — including a zero-downtime server relocation project — and made core servers redundant to eliminate single points of failure.
- Served as the final QA gate before any software release reached production.
- Wrote production software alongside the infrastructure role for roughly seven years before the title formalized it.

Key technologies: C++, Java, SQL, Windows Server, Linux, Active Directory, VMware vSphere, Cisco routing, firewall/VPN, backup & recovery

Tink — DevOps Engineer

Montréal, QC | January 2018 – August 2021

- Managed fleet configuration as code for 600+ Windows and Linux servers, with all subsequent configuration and package/patch state driven declaratively through Puppet and Spacewalk rather than hand-tuned per server.
- Automated OS-level patching and updates, including automated kernel-update reboots, reducing the process to a monthly verification check with near-zero downtime.
- Built the compute, caching, and database layers of a client's AWS migration target environment — EC2, S3, Route 53, VPC, self-managed memcached, serverless database — with no prior AWS experience; the client cancelled before cutover.
- Centralized Jenkins Pipeline as Code across a team of 10–15 developers maintaining 80+ applications for 20+ clients.

Key technologies: Puppet, Spacewalk, AWS (EC2, S3, Route 53, VPC), Jenkins, Bash, Linux, CentOS, RockyOS

Énergir — Senior DevOps Engineer

Montréal, QC | September 2021 – Present

- Led cloud modernization migrating 5–10 mission-critical services to Microsoft Azure, implementing Terraform and Ansible IaC practices that standardized environment provisioning and eliminated configuration drift.
- Owned CI/CD standardization for 12 application teams and 70+ applications across nine distinct runtimes.

Key technologies: Microsoft Azure, Terraform, Ansible, Azure DevOps, GitHub Actions

Desjardins — Senior DevOps Engineer (Contract)

Montréal, QC (Remote) | October 2025 – March 2026 — *concurrent engagement, delivered alongside the Énergir role*

- Automated provisioning of on-demand Artifactory instances using Kubernetes and ArgoCD.
- Delivered a Python/FastAPI service testing the configuration of ~250 remote repositories every 4 hours, publishing to Dynatrace.

Key technologies: Kubernetes, ArgoCD, Python, FastAPI, Dynatrace, Docker

Education

Bachelor of Automated Manufacturing Engineering — École de Technologie Supérieure (ÉTS), Montréal, QC | 2005 – 2016

DCS in Computer Science Technology — Cégep André-Laurendeau, Montréal, QC | 2002 – 2005
