Professional Summary

Senior DevOps engineer with deep configuration-management and infrastructure-automation practice — Puppet-driven fleet configuration for 600+ servers at Tink, Terraform/Ansible IaC at Énergir, and production Kubernetes automation at Desjardins. Takes ownership of production infrastructure other people are hesitant to touch, learning unfamiliar platforms cold under a delivery deadline and replacing manual, fragile processes with automation that holds.

Core Expertise

Infrastructure & Cloud Automation	Microsoft Azure, AWS, Terraform, Ansible, Puppet , Kubernetes, Docker, ArgoCD
CI/CD & Artifact Management	Azure DevOps, GitHub Actions, Jenkins, JFrog Artifactory
Platform Engineering & Enablement	CI/CD standardization, pipeline-as-code, cross-team enablement
Reliability & Production Engineering	Root cause analysis, MTTR reduction, incident response, automated remediation, 24/7 on-call
Programming & Systems	Python, FastAPI, Bash, C++, Java, SQL, NoSQL, Red Hat Linux, CentOS

Work Experience

Tink — DevOps Engineer

Montréal, QC | January 2018 – August 2021

- Managed fleet configuration as code for 600+ servers: enrolled in Puppet, with all subsequent configuration and package/patch state driven declaratively through Puppet and Spacewalk rather than hand-tuned per server.
- Automated OS-level patching and updates, including automated kernel-update reboots, reducing the process to a monthly verification check with near-zero downtime.
- Built the compute, caching, and database layers of a client's AWS migration target environment — EC2, S3, Route 53, VPC, self-managed memcached, serverless database — with no prior AWS experience; the client cancelled before cutover.
- Centralized Jenkins Pipeline as Code across a team of 10–15 developers maintaining 80+ applications for 20+ clients.

Key technologies: Puppet, Spacewalk, Jenkins, ELK Stack, Bash, Linux, AWS (EC2, S3, Route 53, VPC)

Énergir — Senior DevOps Engineer

Montréal, QC | September 2021 – Present

- Led cloud modernization migrating 5–10 mission-critical services to Microsoft Azure, implementing Terraform and Ansible IaC practices that standardized environment provisioning and eliminated configuration drift.
- Owned CI/CD standardization for 12 application teams and 70+ applications across nine distinct runtimes.
- Drove root cause analysis on critical production incidents and built proactive monitoring and automated remediation that reduced MTTR.

Key technologies: Microsoft Azure, Terraform, Ansible, Azure DevOps, GitHub Actions, Python

Desjardins — Senior DevOps Engineer (Contract)

Montréal, QC (Remote) | October 2025 – March 2026 — *concurrent engagement, delivered alongside the Énergir role*

- Automated provisioning of on-demand Artifactory instances using Kubernetes and ArgoCD, letting administrators spin up fully configured environments for safe testing.

- Delivered a Python/FastAPI service testing the configuration of ~250 remote repositories every 4 hours, publishing to Dynatrace.

Key technologies: Kubernetes, ArgoCD, JFrog Artifactory, Python, FastAPI, Dynatrace, Docker, Helm

SOVO Technologies — Lead Technician → Software Engineer

Montréal, QC | November 2008 – December 2017

- Owned all company IT infrastructure, including a zero-downtime server relocation and a redundant architecture eliminating single points of failure, while managing a team of technicians.
- Wrote production software alongside infrastructure work for roughly seven years before the title formalized it.

Key technologies: C++, Java, SQL, Windows Server, Linux, Active Directory, VMware vSphere, Cisco routing, firewall/VPN

Education

Bachelor of Automated Manufacturing Engineering — École de Technologie Supérieure (ÉTS), Montréal, QC | 2005 – 2016

DCS in Computer Science Technology — Cégep André-Laurendeau, Montréal, QC | 2002 – 2005
