Ciena

Re: Application Support Engineer, Service Reliability Engineering

Dear Ciena hiring team,

I am applying for the Application Support Engineer, Service Reliability Engineering role. The combination of infrastructure reliability, incident management, automation scripting, and integration with enterprise application platforms like Salesforce, MuleSoft, and ServiceNow is close to work I already do.

At Énergir, I rebuilt Salesforce delivery with no prior Salesforce experience — replacing legacy ANT deployment scripts with the official Salesforce CLI tooling and building a validation pipeline that tests every candidate merge in a sandbox before it reaches production. I also standardized delivery for MuleSoft as one of nine runtimes I brought under CI/CD across 12 application teams, and I run production change through ServiceNow as part of that same team's operating discipline. That's the specific application-platform overlap your posting names as a plus, not a stretch for me.

The core of the role — designing reliable infrastructure, monitoring system health, leading incident response, and automating repetitive operational tasks — is what I do daily. At Énergir, I drive root-cause analysis on critical production incidents and build the proactive monitoring, dashboards, and automated remediation that reduce Mean Time to Recovery across 70+ applications. At Desjardins, I built a Python/FastAPI service that continuously tested the health of roughly 250 enterprise repositories and published the results to Dynatrace, then built Splunk alerting to catch configuration drift before it became an incident. At Tink, I built a self-healing response for a recurring, unstable Elasticsearch cluster — automating the fix so a known failure mode no longer needed a human paged to resolve it.

I want to name one honest gap: my production cloud depth is Azure-first, and my hands-on AWS experience — building a client's full migration target environment at Tink — was real but non-production and the engagement was cancelled before cutover. I'd rather say that plainly than have it surface later.

What I bring is 18 years of taking ownership of reliability problems other people are hesitant to touch, and direct, current experience with the specific enterprise platforms — Salesforce, MuleSoft, ServiceNow — your posting lists as a differentiator.

I am based near Ottawa, fully bilingual in English and French, and available to work remotely.

Sincerely,

Marc Berthelette
