Professional Summary

Senior DevOps engineer with 18 years of experience driving observability excellence and incident management maturity in production environments. Built and operated Dynatrace-based monitoring at Desjardins, publishing operational telemetry for ~250 enterprise repositories on a 4-hour cycle, and Splunk alerting to catch configuration drift outside approved change paths. Drives root-cause analysis and MTTR reduction across 70+ applications at Énergir, defining and reporting the metrics that make production reliability measurable. Deep Microsoft Azure practice and current, hands-on JIRA-based ticket workflows. Leads without formal authority — running enablement sessions across 12 teams and presenting operational findings to stakeholders outside any reporting line.

Technical Skills

Observability	Dynatrace (dashboards, alerting, telemetry publishing), Splunk (alerting, configuration-drift detection), ELK Stack, PRTG
Incident & Request Management	Root-cause analysis, MTTR reduction, JIRA ticket triage and escalation, blameless postmortems, on-call rotation
SRE & Reliability Practice	SLO/SLI-adjacent metrics definition, proactive monitoring, automated remediation, documentation and audit-driven standards
Cloud & CI/CD	Microsoft Azure (production, 5–10 service migrations led), Azure DevOps, GitHub Actions, Jenkins Pipeline as Code
Infrastructure as Code	Terraform, Ansible, Puppet
Programming & Automation	Python, FastAPI, Bash, Java, SQL, NoSQL
Leadership & Enablement	Cross-team mentoring outside any reporting line, stakeholder reporting, technical documentation

Work Experience

Énergir — Senior DevOps Engineer

Montréal, QC | September 2021 – Present

- Drove root-cause analysis on critical production incidents and built proactive monitoring, dashboards, alerts, and automated remediation that reduced MTTR across 12 application teams and 70+ applications.
- Led cloud modernization migrating several mission-critical services to Microsoft Azure, implementing Terraform and Ansible IaC practices that standardized environment provisioning.
- Drove CI/CD and platform-engineering adoption across 12 teams outside any reporting line, running recurring enablement sessions (~6/year) and presenting operational findings to stakeholders.
- Cut false-positive pipeline failures by separating application-code errors from platform-pipeline errors in reporting — reducing diagnostic toil for incident triage.

Key technologies: Microsoft Azure, Terraform, Ansible, Python, Dynatrace, Splunk, Azure DevOps, GitHub Actions

Desjardins — Senior DevOps Engineer (Contract)

Montréal, QC (Remote) | October 2025 – March 2026 — *concurrent engagement alongside the Énergir role*

- Designed and built a Python/FastAPI service that tested the configuration and health of ~250 enterprise JFrog Artifactory repositories every 4 hours, publishing operational telemetry to Dynatrace with technology-segmented dashboards.
- Built Splunk alerting to detect manual configuration changes made outside the CI/CD pipeline, improving auditability and compliance.
- Extended the engagement past its original scope by building the validation logic tool-agnostic and the test set configurable — the same harness then de-risked the enterprise Artifactory version upgrade.

- Automated on-demand Artifactory environment provisioning with Kubernetes and ArgoCD.

Key technologies: Python, FastAPI, Dynatrace, Splunk, JFrog Artifactory, Kubernetes, ArgoCD, GitHub Actions

Tink — DevOps Engineer

Montréal, QC | January 2018 – August 2021

- Centralized Jenkins Pipeline as Code across 10–15 developers maintaining 80+ applications for 20+ clients, adding release visibility through JIRA integration.
- Drove down 24/7 on-call frequency via root-cause analysis and prevention — from roughly one page every 2 rotations to one every 4–5 by the end.
- Built centralized log aggregation using the ELK Stack, enabling proactive detection of production anomalies and reducing incident response times.
- Built a self-healing response for a recurring, unstable Elasticsearch cluster, automating remediation so a known failure mode no longer required a human page.
- Conceived and built, unprompted, a software inventory platform surfacing CVE exposure, end-of-life software, and SSL/TLS certificate scoring across a 600+ server fleet.

Key technologies: Jenkins, JIRA, ELK Stack, Bash, Puppet, Spacewalk, PRTG

SOVO Technologies — Lead Technician to Software Engineer

Montréal, QC | November 2008 – December 2017

- Owned company IT infrastructure, delivered a zero-downtime server relocation, and served as the final QA gate before production releases.
- Wrote production software for approximately seven years before the title formalized it.

Key technologies: C++, Java, SQL, Windows Server, VMware vSphere

Education

Bachelor of Automated Manufacturing Engineering — École de Technologie Supérieure, Montréal, QC | 2005 – 2016

DCS in Computer Science Technology — Cégep André-Laurendeau, Montréal, QC | 2002 – 2005
