Professional Summary

Senior site reliability and DevOps engineer with 18 years of experience supporting production infrastructure in regulated financial services. Delivered a 6-month Desjardins engagement hardening the enterprise JFrog Artifactory platform — building Dynatrace-published health monitoring and Splunk-based configuration-drift alerting for the organization's core delivery infrastructure. Drives root-cause analysis, MTTR reduction, and CI/CD maturity across 70+ applications at Énergir, a regulated energy utility. Deep, current Microsoft Azure practice with Terraform and Ansible IaC. Champions DevOps and SRE best practices as a matter of course — not because a title requires it, but because it's how production systems stay dependable.

Technical Skills

Site Reliability Engineering	Root-cause analysis, MTTR reduction, incident management, proactive monitoring, automated remediation, on-call rotation
Observability	Dynatrace, Splunk, ELK Stack, dashboards, alerting, health-check telemetry
CI/CD & Deployment	Azure DevOps, GitHub Actions, Jenkins Pipeline as Code, pipeline validation gates, deployment automation
Cloud Platform	Microsoft Azure (production, 5–10 service migrations led)
Infrastructure as Code	Terraform, Ansible, Puppet
Security & Compliance	Artifact lifecycle policy enforcement, audit-driven configuration governance, regulated-environment operations (financial services, energy)
Programming & Automation	Python, FastAPI, Bash, Java, SQL, NoSQL

Work Experience

Énergir — Senior DevOps Engineer

Montréal, QC | September 2021 – Present

- Drove root-cause analysis on critical production incidents and built proactive monitoring, dashboards, alerts, and automated remediation that reduced MTTR across 12 application teams and 70+ applications — a regulated energy-sector production environment.
- Led cloud modernization migrating several mission-critical services to Microsoft Azure, implementing Terraform and Ansible IaC practices that standardized provisioning and reduced configuration drift.
- Continuously improved CI/CD pipelines across nine distinct runtimes, cutting false-positive failures by separating application-code errors from platform-pipeline errors in reporting.
- Drove platform-engineering adoption across 12 teams outside any reporting line, championing best practices through recurring enablement sessions and stakeholder reporting.

Key technologies: Microsoft Azure, Terraform, Ansible, Python, Dynatrace, Splunk, Azure DevOps, GitHub Actions

Desjardins — Senior DevOps Engineer (Contract)

Montréal, QC (Remote) | October 2025 – March 2026 — *concurrent engagement alongside the Énergir role, financial services sector*

- Designed and built a Python/FastAPI service that tested the health and configuration of ~250 enterprise JFrog Artifactory repositories every 4 hours, publishing operational telemetry to Dynatrace with technology-segmented dashboards.
- Implemented artifact lifecycle policies to enforce retention standards; built Splunk alerting to detect manual configuration changes made outside the CI/CD pipeline, improving auditability and compliance in a regulated environment.

- Extended the engagement past its original scope by building the validation logic tool-agnostic — the same harness then de-risked the enterprise Artifactory version upgrade.
- Automated provisioning of on-demand Artifactory environments with Kubernetes and ArgoCD.

Key technologies: Python, FastAPI, Dynatrace, Splunk, JFrog Artifactory, Kubernetes, ArgoCD, GitHub Actions

Tink — DevOps Engineer

Montréal, QC | January 2018 – August 2021

- Drove down 24/7 on-call frequency via root-cause analysis and prevention — from roughly one page every 2 rotations to one every 4–5 by the end.
- Built a self-healing response for a recurring, unstable Elasticsearch cluster, automating remediation so a known failure mode no longer required a human page.
- Built centralized log aggregation using the ELK Stack, enabling proactive detection of production anomalies and faster incident response.
- Centralized Jenkins Pipeline as Code across 10–15 developers maintaining 80+ applications for 20+ clients.
- Built the compute, caching, and database layers of a client's full AWS migration target environment — EC2, S3, Route 53, self-managed memcached, serverless relational database — with no prior AWS experience; the client cancelled the migration before cutover.

Key technologies: ELK Stack, Bash, Jenkins, Puppet, Spacewalk, AWS (EC2, S3, Route 53, VPC)

SOVO Technologies — Lead Technician to Software Engineer

Montréal, QC | November 2008 – December 2017

- Owned company IT infrastructure, delivered a zero-downtime server relocation, and served as the final QA gate before production releases.
- Wrote production software for approximately seven years before the title formalized it.

Key technologies: C++, Java, SQL, Windows Server, VMware vSphere

Education

Bachelor of Automated Manufacturing Engineering — École de Technologie Supérieure, Montréal, QC | 2005 – 2016

DCS in Computer Science Technology — Cégep André-Laurendeau, Montréal, QC | 2002 – 2005
