Aquatic Informatics (a Veralto company)

Re: Sr. Engineer, Product InfraOps (Remote)

Dear Aquatic Informatics Hiring Team,

I'm applying for the Sr. Engineer, Product InfraOps role. What stood out in your posting is that it asks someone to own reliability and operational maturity across the platform rather than work a queue of infrastructure tickets — that distinction is the work I've spent the last several years doing. At Énergir I implemented Terraform and Ansible Infrastructure as Code to standardize provisioning and eliminate configuration drift across environments, led the Azure migration of 5–10 mission-critical services, and standardized CI/CD across nine distinct runtimes for 12 application teams and 70+ applications.

Your "lead through influence" requirement is the part I'd point to first. Those 12 teams sat outside any reporting line of mine, and delivered tooling nobody adopts is shelfware — so after each pipeline shipped I ran recurring enablement sessions with the team until the tooling was actually in use. The same instinct shows up at Desjardins: asked to verify the configuration of roughly 250 enterprise Artifactory repositories, I built a Python/FastAPI service that tested all of them every four hours and published segmented health dashboards to Dynatrace — but built the validation logic tool-agnostic and the test set configurable rather than hard-coding it to JFrog. That was more work than the ask, and it's why the same harness later de-risked the platform's version upgrade. My rule is to build what is best for the client, not necessarily what is cheapest.

On the rest of your requirements: Terraform and Ansible are my daily IaC tooling; I've built and operated CI/CD in Azure DevOps, GitHub Actions, and Jenkins; I automated on-demand environment provisioning with Kubernetes and ArgoCD at Desjardins; and observability ownership — Dynatrace, Splunk, ELK — has been part of every role I've held, including the root cause analysis and MTTR-reduction work at Énergir. I'm based in Ontario, bilingual French/English, and available immediately.

Best regards,

Marc Berthelette
