JFrog

Re: Senior Professional Services DevOps Engineer

Dear JFrog hiring team,

I am applying for the Senior Professional Services DevOps Engineer role because I recently completed a six-month engagement centred on the exact platform and customer outcomes this position supports. At Desjardins, I hardened and operationalized its enterprise JFrog Artifactory environment across observability, automated testing, environment provisioning, and governance.

The engagement began with a request to verify the configuration of approximately 250 remote repositories. I designed and built a Python/FastAPI service that exercised them every four hours and published technology-specific health signals to Dynatrace. Instead of hard-coding the solution to a single immediate requirement, I made most validation logic tool-agnostic and the test set configurable. That design allowed the same system to become the regression safety net for Desjardins' enterprise Artifactory upgrade.

I also automated isolated Artifactory environments with Kubernetes and ArgoCD, allowing administrators to test upgrades and configuration changes safely. I implemented artifact lifecycle policies and built Splunk alerts that detected changes made outside approved CI/CD pipelines. The repository estate covered Docker, Helm, Node.js/npm, Maven, Python, NuGet, and Debian packages, giving me direct experience with the heterogeneous artifact workflows JFrog supports.

My broader background aligns with the Professional Services mandate. At Énergir, I standardized CI/CD delivery across nine runtimes for 12 teams and more than 70 applications. I combined implementation with documentation and recurring enablement sessions so teams understood and adopted the platform rather than treating it as a black box. At Tink, I centralized Jenkins Pipeline as Code for more than 80 applications across 20 clients and supported a 600-server Linux estate using Puppet and operational automation.

What appeals to me about this role is the opportunity to combine hands-on engineering with customer discovery, implementation, training, and feedback into the product roadmap. I have learned that successful platform work depends as much on understanding the customer's constraints and enabling their teams as it does on configuring the technology.

I am based in Smiths Falls, Ontario, work in the Eastern time zone, and am fully bilingual in French and English. I would welcome the opportunity to discuss how my recent Artifactory delivery experience and broader CI/CD background could help JFrog customers succeed.

Sincerely,

Marc Berthelette
