Medinext Global LLC

Re: DevOps / Cloud Engineer (Remote, Full-time)

Dear Medinext Hiring Team,

I'm a Canadian citizen eligible for TN visa sponsorship, applying for the DevOps / Cloud Engineer role. I bring real, hands-on experience across the stack you're describing: CI/CD pipeline design and ownership (standardized delivery across nine runtimes for a dozen application teams at Énergir), Terraform-driven Infrastructure as Code, and Kubernetes used via ArgoCD-based GitOps automation for Desjardins' enterprise Artifactory platform — I haven't administered clusters directly, but the deployment automation and CI/CD integration are squarely my day-to-day work.

My deepest cloud practice is Microsoft Azure; my AWS experience is lighter (an early-career greenfield migration with no prior AWS background going in). I also bring 8 years with SonarQube and roughly 5 years with JFrog Artifactory Xray for security/vulnerability scanning integrated into the pipeline.

I'd welcome the opportunity to discuss the role, including sponsorship details and how the position's scope aligns with my experience level.

Best regards,

Marc Berthelette
