Re: Platform Engineer (DevOps / CI/CD / Automation / Observability) – SS27
Vaco by Highspring

Hello Vaco by Highspring team,

I'm applying for the Platform Engineer (DevOps / CI/CD / Automation / Observability) contract role. This scope maps closely to my last two engagements: at Desjardins, I automated on-demand environment provisioning using Kubernetes and ArgoCD, and built a Python/FastAPI observability service that tested ~250 Artifactory repositories every 4 hours with results published to Dynatrace. At Énergir, I standardized CI/CD delivery across nine distinct runtimes for 12 application teams and 70+ applications, and built Splunk-based alerting and RCA practices to reduce MTTR.

I'm incorporated in Canada and would want to confirm contracting mechanics (corp-to-corp / independent contractor terms) early in the process, but I'm available to start quickly at the posted contract-independent rate.

Best regards,

Marc Berthelette
