Re: Lead Site Reliability Engineer – Canada, Remote
VistaPrint

Hi VistaPrint team,

I'm applying for the Lead Site Reliability Engineer role. Driving reliability improvements across teams I don't directly manage is core to how I've worked for the past several years: at Énergir, I drove root cause analysis on critical production incidents, built proactive monitoring and observability practices to reduce MTTR, and delivered recurring enablement sessions with 12 application teams (70+ applications) to drive adoption of CI/CD and platform-engineering standards — directly relevant to your focus on incident-pattern analysis, post-incident reviews, and influencing reliability adoption without direct authority.

Azure is my deepest cloud platform, and I've implemented Terraform and Ansible Infrastructure as Code practices to standardize provisioning, alongside Dynatrace and Splunk observability work — all relevant to the cloud, IaC, and observability scope of this role. I'm also comfortable working with AI-assisted tooling as part of a modern engineering workflow.

I'm incorporated in Canada, fully bilingual (French/English), and available to start quickly on a remote basis.

Best regards,

Marc Berthelette
