

Marc Berthelette

Cloud Engineer · Infrastructure as Code · Security and Compliance Automation

Smiths Falls, ON, Canada · Remote · marc.berthelette@gmail.com

linkedin.com/in/marc-berthelette-3aba6917 · Bilingual: French (native) · English (fluent) · Eligible to work in Canada · Available immediately

Professional Summary

Senior cloud, DevOps, and platform engineer with 18 years of experience automating infrastructure, delivery, governance, and operational controls in regulated financial-services and energy environments. At Énergir, standardized Terraform and Ansible practices, supported Azure modernization, and partnered with Enterprise Architecture on cloud-native and zero-trust requirements. At Desjardins, automated Kubernetes environments and implemented Splunk controls that detected changes made outside approved CI/CD pipelines. Brings deep Azure and CI/CD experience, hands-on AWS infrastructure exposure, Terraform, GitHub Actions, Python, Bash, incident response, and a record of translating operational and compliance requirements into enforceable automation.

Technical Skills

Cloud and Networking	Microsoft Azure, AWS (EC2, S3, Route 53, VPC), DNS, routing, firewalls, VPNs, load balancing, hybrid infrastructure
Infrastructure as Code	Terraform, Ansible, Puppet, version-controlled configuration, reusable environment standards, configuration-drift reduction
CI/CD and Automation	GitHub Actions, Azure DevOps, Jenkins Pipeline as Code, Git, Python, FastAPI, Bash, automated validation
Security and Compliance	Change governance, audit controls, drift detection, CVE and end-of-life risk visibility, secrets-aware delivery, zero-trust collaboration
Containers and Platforms	Docker, Kubernetes, ArgoCD, Helm, JFrog Artifactory, Linux, Windows Server
Observability and Operations	Dynatrace, Splunk, ELK Stack, PRTG, incident response, root-cause analysis, automated remediation, ServiceNow

Work Experience

Énergir — Senior DevOps Engineer

Montréal, QC | September 2021 – Present

- Led Azure modernization for several mission-critical services and standardized Terraform and Ansible practices across development, staging, and production.
- Partnered with Enterprise Architecture to design resilient, cost-conscious infrastructure aligned with cloud-native and zero-trust security principles.
- Standardized CI/CD across nine runtimes for 12 application teams and 70+ applications, replacing manual delivery with reusable pipelines and built-in quality gates.
- Rebuilt Salesforce delivery with the official CLI and an isolated validation environment that ran the full test suite before promotion, strengthening change control and release reliability.
- Drove root-cause analysis on critical incidents and delivered monitoring, dashboards, and automated remediation that improved reliability and reduced recovery time.

Key technologies: Microsoft Azure, Azure DevOps, GitHub Actions, Terraform, Ansible, Python, Bash, Docker, ELK, ServiceNow

Desjardins — Senior DevOps Engineer (Contract)

Montréal, QC (Remote) | October 2025 – March 2026 — *concurrent engagement alongside the Énergir role*

- Built Splunk alerts that detected configuration changes made outside approved CI/CD pipelines, improving auditability and enforcement in a regulated financial-services environment.
- Designed and built a Python/FastAPI service that validated the configuration and health of approximately 250 enterprise repositories every four hours and published results to Dynatrace.

- Turned an initial configuration-check request into a configurable validation harness that became the regression safety net for an enterprise platform upgrade.
- Automated isolated JFrog Artifactory environments with Kubernetes and ArgoCD, enabling controlled testing of upgrades and configuration changes.
- Implemented artifact lifecycle policies that enforced retention standards and reduced unnecessary storage consumption.

Key technologies: Python, FastAPI, GitHub Actions, Docker, Kubernetes, ArgoCD, Helm, JFrog Artifactory, Dynatrace, Splunk

Tink — DevOps Engineer

Montréal, QC | January 2018 – August 2021

- Built the compute, storage, DNS, networking, caching, and database layers of an AWS migration target using EC2, S3, Route 53, VPC, self-managed caching, and a serverless relational database.
- Centralized Jenkins Pipeline as Code for 80+ applications across 20+ clients, improving delivery consistency and release visibility.
- Automated operating-system patching and kernel-update reboots across 600+ Linux servers, reducing ongoing work to a monthly verification check with near-zero downtime.
- Conceived and built a software inventory platform that exposed CVE, end-of-life software, application-version, and SSL/TLS risks across the 600+ server estate.
- Built a self-healing response for an unstable Elasticsearch cluster so monitoring automatically remediated a recurring production failure.

Key technologies: AWS, EC2, S3, Route 53, VPC, Jenkins, Bash, Linux, Puppet, ELK Stack, PRTG, Jira

SOVO Technologies — Lead Technician to Software Engineer

Montréal, QC | November 2008 – December 2017

- Owned company infrastructure, delivered a zero-downtime server relocation, introduced redundancy, and administered networking, identity, virtualization, backup, and recovery systems.
- Designed and wrote production software for approximately seven years while managing and training technicians and serving as the final quality gate for releases.

Key technologies: C++, Java, SQL, Linux, Windows Server, Active Directory, VMware vSphere, Cisco networking, firewalls, VPNs

Education

Bachelor of Automated Manufacturing Engineering — École de Technologie Supérieure, Montréal, QC | 2005 – 2016

DCS in Computer Science Technology — Cégep André-Laurendeau, Montréal, QC | 2002 – 2005
