

Marc Berthelette

Senior DevOps Engineer · Multi-Cloud Infrastructure · Reliability Engineering

Smiths Falls, ON, Canada · Remote · marc.berthelette@gmail.com

linkedin.com/in/marc-berthelette-3aba6917 · Bilingual: French (native) · English (fluent) · Eligible to work in Canada · Available immediately

Professional Summary

Senior DevOps and platform engineer with 18 years of experience automating infrastructure, software delivery, observability, and operational controls. At Desjardins, built a Python/FastAPI health service for approximately 250 enterprise repositories, automated Kubernetes environments with ArgoCD, and implemented Splunk alerts for changes made outside approved CI/CD paths. At Énergir, standardized delivery for 12 teams and 70+ applications, implemented Terraform and Ansible infrastructure practices, and supported Azure modernization in a regulated energy environment. Brings deep Azure and CI/CD experience, hands-on AWS exposure, incident response, container delivery, and a disciplined approach to AI-assisted engineering with explicit scope and human-validation gates.

Technical Skills

Cloud and Infrastructure	Microsoft Azure, AWS (EC2, S3, Route 53, VPC), Terraform, Ansible, Puppet, Linux, Windows Server
CI/CD and Automation	Azure DevOps, GitHub Actions, Jenkins, Git, Python, FastAPI, Bash, Pipeline as Code
Containers and Platforms	Docker, Kubernetes, ArgoCD, Helm, JFrog Artifactory, Nexus, CloudFoundry
Observability and Operations	Dynatrace, Splunk, ELK Stack, PRTG, incident response, root-cause analysis, automated remediation
Security and Compliance	Configuration governance, drift detection, audit controls, CVE and end-of-life risk visibility, zero-trust collaboration
Engineering Practices	Infrastructure as Code, GitOps, platform enablement, technical documentation, AI-assisted delivery with human validation

Work Experience

Énergir — Senior DevOps Engineer

Montréal, QC | September 2021 – Present

- Standardized CI/CD across nine runtimes for 12 application teams and 70+ applications, replacing manual delivery with reusable pipelines and built-in quality gates.
- Led Azure modernization for several mission-critical services and implemented Terraform and Ansible practices that improved consistency across development, staging, and production.
- Rebuilt Salesforce delivery with the official CLI and an isolated validation environment that ran the complete test suite before promotion, reducing missed deployment windows to one since launch.
- Drove root-cause analysis on critical incidents and delivered monitoring, dashboards, and automated remediation that improved reliability and reduced recovery time.
- Introduced controlled AI-assisted engineering practices with explicit scope limits and mandatory human validation before generated changes could reach production.

Key technologies: Microsoft Azure, Azure DevOps, GitHub Actions, Terraform, Ansible, Python, Java, Node.js, Docker, ELK, ServiceNow

Desjardins — Senior DevOps Engineer (Contract)

Montréal, QC (Remote) | October 2025 – March 2026 — *concurrent engagement alongside the Énergir role*

- Designed and built a Python/FastAPI service that validated the configuration and health of approximately 250 remote Artifactory repositories every four hours and published segmented operational signals to Dynatrace.
- Extended the initial configuration-check request into a configurable, mostly tool-agnostic validation harness that became the regression safety net for an enterprise Artifactory upgrade.

- Automated on-demand Artifactory environments with Kubernetes and ArgoCD, enabling repeatable testing of upgrades and configuration changes in an isolated environment.
- Built Splunk alerts that detected configuration changes made outside approved CI/CD pipelines, improving auditability and compliance in a financial-services environment.
- Implemented artifact lifecycle policies that enforced retention standards and reduced unnecessary storage consumption.

Key technologies: Python, FastAPI, JFrog Artifactory, Docker, Kubernetes, ArgoCD, Helm, GitHub Actions, Dynatrace, Splunk

Tink — DevOps Engineer

Montréal, QC | January 2018 – August 2021

- Centralized Jenkins Pipeline as Code for 80+ applications across 20+ clients, improving delivery consistency and adding release visibility through Jira integration.
- Built the compute, storage, DNS, networking, caching, and database layers of an AWS migration target using EC2, S3, Route 53, VPC, self-managed caching, and a serverless relational database.
- Automated operating-system patching and kernel-update reboots across 600+ servers, reducing the process to a monthly verification check with near-zero downtime.
- Conceived and built a software inventory platform for the 600+ server estate, exposing CVE, end-of-life software, application-version, and SSL/TLS risks directly to product owners.
- Built a self-healing response for an unstable Elasticsearch cluster so monitoring automatically remediated a known production failure without paging an engineer.

Key technologies: AWS, EC2, S3, Route 53, VPC, Jenkins, Bash, Linux, ELK Stack, Puppet, Spacewalk, PRTG, Jira

SOVO Technologies — Lead Technician to Software Engineer

Montréal, QC | November 2008 – December 2017

- Owned company infrastructure, delivered a zero-downtime server relocation, and introduced redundancy that eliminated core single points of failure while managing and training technicians.
- Designed and wrote production software for approximately seven years, including a production scheduling system, voice-recognition evaluation software, and multilingual dictionary infrastructure.

Key technologies: C++, Java, SQL, NoSQL, Linux, Windows Server, Active Directory, VMware vSphere, networking, backup and recovery

Education

Bachelor of Automated Manufacturing Engineering — École de Technologie Supérieure, Montréal, QC | 2005 – 2016

DCS in Computer Science Technology — Cégep André-Laurendeau, Montréal, QC | 2002 – 2005
