Professional Summary

Senior infrastructure, reliability, and platform engineer with 18 years of experience replacing recurring operational work with durable automation. At Desjardins, built a Python/FastAPI service that continuously validated approximately 250 enterprise repositories, automated isolated environments with Kubernetes and ArgoCD, and published platform-health signals to Dynatrace. At Énergir, standardized Terraform and Ansible infrastructure practices and CI/CD delivery for 12 teams and 70+ applications. Brings Python, Kubernetes, Helm, ArgoCD, Terraform, GitHub Actions, Linux, observability, incident response, and hands-on AWS infrastructure exposure, with a strong record of independently learning complex systems and improving reliability.

Technical Skills

Infrastructure and Cloud	Microsoft Azure, AWS (EC2, S3, Route 53, VPC), Terraform, Ansible, Puppet, Linux, networking, DNS
Containers and GitOps	Docker, Kubernetes, ArgoCD, Helm, automated environment provisioning, container delivery
Programming and Automation	Python, FastAPI, Bash, Java, C++, SQL, REST services, operational automation
CI/CD and Developer Tooling	GitHub Actions, Azure DevOps, Jenkins Pipeline as Code, Git, reusable pipelines, quality gates
Observability and Reliability	Dynatrace, Splunk, ELK Stack, PRTG, incident response, root-cause analysis, automated remediation
Platform Engineering	Internal tooling, service-health validation, configuration governance, documentation, team enablement

Work Experience

Énergir — Senior DevOps Engineer

Montréal, QC | September 2021 – Present

- Standardized CI/CD across nine runtimes for 12 application teams and 70+ applications, replacing manual delivery with reusable pipelines and built-in quality gates.
- Led Azure modernization for several mission-critical services and standardized Terraform and Ansible practices across development, staging, and production.
- Drove root-cause analysis on critical incidents and implemented monitoring, dashboards, and automated remediation that improved reliability and reduced recovery time.
- Separated application-code failures from platform failures in pipeline reporting, making delivery results self-diagnosing and reducing unnecessary escalation.
- Independently learned unfamiliar application ecosystems and translated their delivery requirements into reusable platform components and documentation.

Key technologies: Python, Microsoft Azure, Azure DevOps, GitHub Actions, Terraform, Ansible, Docker, Java, Node.js, ELK, ServiceNow

Desjardins — Senior DevOps Engineer (Contract)

Montréal, QC (Remote) | October 2025 – March 2026 — *concurrent engagement alongside the Énergir role*

- Designed and built a Python/FastAPI service that validated the configuration and health of approximately 250 remote repositories every four hours and published technology-specific operational signals to Dynatrace.
- Extended the initial request into a configurable, mostly tool-agnostic validation system that became the regression safety net for an enterprise platform upgrade.

- Automated isolated JFrog Artifactory environments with Kubernetes and ArgoCD, giving administrators repeatable systems for testing upgrades and configuration changes.
- Built Splunk alerts for changes made outside approved CI/CD pipelines and implemented lifecycle policies, improving auditability and platform reliability.
- Supported container and package workflows spanning Docker, Helm, Node.js, Maven, Python, NuGet, and Debian repositories.

Key technologies: Python, FastAPI, Docker, Kubernetes, ArgoCD, Helm, GitHub Actions, JFrog Artifactory, Dynatrace, Splunk

Tink — DevOps Engineer

Montréal, QC | January 2018 – August 2021

- Centralized Jenkins Pipeline as Code for 80+ applications across 20+ clients, standardizing delivery and adding release visibility through Jira integration.
- Built the compute, storage, DNS, networking, caching, and database layers of an AWS migration target using EC2, S3, Route 53, VPC, self-managed caching, and a serverless relational database.
- Automated operating-system patching and kernel-update reboots across 600+ Linux servers, reducing ongoing work to a monthly verification check with near-zero downtime.
- Conceived and built a software inventory platform for the 600+ server estate, exposing CVE, end-of-life software, and SSL/TLS risks directly to product owners.
- Built a self-healing response for an unstable Elasticsearch cluster so monitoring automatically remediated a recurring production failure.

Key technologies: AWS, EC2, S3, Route 53, VPC, Jenkins, Python, Bash, Linux, Puppet, ELK Stack, PRTG, Jira

SOVO Technologies — Lead Technician to Software Engineer

Montréal, QC | November 2008 – December 2017

- Owned company infrastructure, delivered a zero-downtime server relocation, and introduced redundancy that eliminated core single points of failure while managing and training technicians.
- Designed and wrote production software for approximately seven years, including a scheduling platform, voice-recognition evaluation software, and multilingual dictionary infrastructure.

Key technologies: C++, Java, SQL, NoSQL, Linux, Windows Server, Active Directory, VMware vSphere, networking

Education

Bachelor of Automated Manufacturing Engineering — École de Technologie Supérieure, Montréal, QC | 2005 – 2016

DCS in Computer Science Technology — Cégep André-Laurendeau, Montréal, QC | 2002 – 2005
