Professional Summary

Senior DevOps and platform engineering consultant with 18 years of experience replacing fragile operational work with repeatable automation across production environments. At Énergir, standardized Continuous Integration / Continuous Delivery (CI/CD) for 12 teams and 70+ applications, automated previously manual Oracle and Salesforce delivery, supported Azure modernization, and improved reliability through monitoring and automated remediation. At Desjardins, delivered a six-month engagement that combined Python automation, production telemetry, controlled configuration changes, and repeatable Kubernetes test environments for an enterprise platform. Brings deep Azure, Terraform, CI/CD, Linux, observability, incident response, and regulated-industry experience, with a record of learning unfamiliar systems quickly and enabling cross-functional teams to operate them safely.

Technical Skills

Cloud and Infrastructure	Microsoft Azure, Terraform, Ansible, Puppet, Linux, Windows Server, AWS (EC2, S3, Route 53, VPC)
CI/CD and Deployment Automation	Azure DevOps, GitHub Actions, Jenkins, Pipeline as Code, ArgoCD, Git, Python, Bash
Containers and Platforms	Docker, Kubernetes, Helm, JFrog Artifactory, Nexus, CloudFoundry
Observability and Production Operations	Dynatrace, Splunk, ELK Stack, PRTG, incident response, root-cause analysis, automated remediation, 24/7 on-call
Configuration and Security Controls	Infrastructure as Code (IaC), configuration governance, drift detection, vulnerability visibility, audit controls, zero-trust collaboration
Data and Systems	Oracle, SQL, NoSQL, FastAPI, Java, C++, backup and recovery, performance troubleshooting

Work Experience

Énergir — Senior DevOps Engineer

Montréal, QC | September 2021 – Present

- Standardized CI/CD across nine runtimes for 12 application teams and 70+ applications, replacing manual deployments with reusable pipelines, automated validation, and built-in quality gates.
- Automated Oracle delivery after an earlier implementation attempt had failed, converting a fully manual deployment process into a repeatable delivery workflow for a production application team.
- Rebuilt Salesforce delivery with the official CLI and a dedicated validation environment that ran the complete test suite before promotion, reducing missed deployment windows to one since launch.
- Led Azure modernization for several mission-critical services and implemented Terraform and Ansible practices that improved configuration consistency across development, staging, and production.
- Drove root-cause analysis on critical production incidents and delivered telemetry, dashboards, and automated remediation that improved visibility and reduced recovery time.

Key technologies: Microsoft Azure, Azure DevOps, GitHub Actions, Terraform, Ansible, Python, Bash, Oracle, Docker, ELK Stack, ServiceNow

Desjardins — Senior DevOps Engineer (Contract)

Montréal, QC (Remote) | October 2025 – March 2026 — concurrent engagement alongside the Énergir role

- Delivered a six-month engagement hardening an enterprise JFrog platform, building a Python/FastAPI service that validated approximately 250 remote repositories every four hours and published operational telemetry to Dynatrace.

- Extended the initial configuration-check request into a configurable validation harness that became the regression safety net for an enterprise Artifactory upgrade.
- Automated on-demand Artifactory environments with Kubernetes and ArgoCD, giving administrators repeatable, isolated environments for testing upgrades and configuration changes.
- Built Splunk alerts for configuration changes made outside approved CI/CD paths, improving auditability and enabling teams to identify production drift quickly.
- Implemented artifact lifecycle policies that enforced retention standards and reduced unnecessary storage consumption.

Key technologies: Python, FastAPI, JFrog Artifactory, Docker, Kubernetes, ArgoCD, Helm, GitHub Actions, Dynatrace, Splunk

Tink — DevOps Engineer

Montréal, QC | January 2018 – August 2021

- Centralized Jenkins Pipeline as Code for 80+ applications across 20+ clients, standardizing deployment procedures and adding release visibility through Jira integration.
- Automated operating-system patching, maintenance, and kernel-update reboots across 600+ servers, reducing the process to a monthly verification check with near-zero downtime.
- Built the compute, storage, DNS, networking, caching, and database layers of an AWS migration target using EC2, S3, Route 53, VPC, self-managed caching, and a serverless relational database.
- Built fleet-wide software inventory and vulnerability visibility covering application versions, CVEs, end-of-life software, and SSL/TLS posture across 600+ servers.
- Implemented self-healing automation for an unstable Elasticsearch cluster so monitoring restored service automatically instead of paging an engineer.

Key technologies: Jenkins, Bash, Linux, Puppet, Spacewalk, ELK Stack, PRTG, Jira, AWS, SQL, server maintenance, vulnerability tracking

SOVO Technologies — Lead Technician to Software Engineer

Montréal, QC | November 2008 – December 2017

- Owned company infrastructure, delivered a zero-downtime server relocation, and introduced redundancy that eliminated core single points of failure while managing and training technicians.
- Maintained backup and recovery capabilities and served as the final quality-assurance gate for production releases.
- Designed and wrote production software for approximately seven years, including a scheduling system, voice-recognition evaluation software, and multilingual dictionary infrastructure.

Key technologies: C++, Java, SQL, NoSQL, Linux, Windows Server, Active Directory, VMware vSphere, networking, backup and recovery

Education

Bachelor of Automated Manufacturing Engineering — École de Technologie Supérieure, Montréal, QC | 2005 – 2016

DCS in Computer Science Technology — Cégep André-Laurendeau, Montréal, QC | 2002 – 2005
