

Marc Berthelette

Senior Site Reliability and Platform Engineer

Smiths Falls, ON, Canada · Remote · marc.berthelette@gmail.com

linkedin.com/in/marc-berthelette-3aba6917 · Bilingual French and English · Incorporated in Canada · Available immediately

Professional Summary

Senior site reliability and platform engineer with 18 years of experience improving the performance, availability, and operability of production systems. Combines Python and systems engineering with deep observability, incident analysis, automation, and Internet infrastructure experience. At Énergir, standardized delivery and reliability practices across 12 teams and more than 70 applications, led root-cause analysis for critical incidents, and built monitoring and automated remediation. At Desjardins, delivered a Python/FastAPI service that continuously measured the health of approximately 250 enterprise repositories and published actionable telemetry to Dynatrace. Experienced leading technical work across organizational boundaries, translating complex findings for stakeholders, and turning operational evidence into durable platform improvements.

Technical Skills

Reliability Engineering	Production reliability, incident response, root-cause analysis, MTTR reduction, automated remediation, 24/7 on-call, operational runbooks
Observability and Analysis	Dynatrace, Splunk, ELK Stack, PRTG, metrics, logs, dashboards, alerting, health signals, performance troubleshooting
Programming and Automation	Python, FastAPI, Bash, SQL, Java, C++, APIs, Pipeline as Code, systems automation
Networking and Internet Systems	DNS, HTTP/HTTPS, TLS, TCP/IP, load balancing, routing, firewalls, proxies, NetScaler, Cisco networking
Cloud and Infrastructure	Microsoft Azure, Terraform, Ansible, Linux, Windows Server, AWS (EC2, S3, Route 53, VPC)
Platforms and Delivery	Jenkins, Azure DevOps, GitHub Actions, Docker, Kubernetes, ArgoCD, Helm, JFrog Artifactory, CloudFoundry
Technical Leadership	Cross-team mentorship, stakeholder communication, technical evaluations, standards, documentation, enablement without reporting authority

Work Experience

Énergir — Senior DevOps Engineer

Montréal, QC | September 2021 – Present

- Led CI/CD and platform-reliability standardization across 12 application teams and more than 70 applications spanning nine technology stacks, establishing reusable delivery patterns, validation controls, and operational practices.
- Drove advanced root-cause analysis for critical production incidents and implemented proactive monitoring, dashboards, alerts, and automated remediation to improve service visibility and reduce recovery time.
- Separated application failures from platform-pipeline failures in reporting, turning noisy build results into actionable signals that directed each issue to the correct engineering team.
- Rebuilt Salesforce delivery with the supported CLI and a validation pipeline that deployed every candidate change to a dedicated sandbox and ran the full test suite before promotion, reducing missed deployment windows to one since launch.
- Led Microsoft Azure modernization for several mission-critical services and implemented Terraform and Ansible practices that standardized environments and reduced configuration drift.
- Evaluated emerging infrastructure and cloud technologies through technical research and proofs of concept, communicating findings and recommendations to engineering stakeholders and Enterprise Architecture.
- Led adoption across teams outside any reporting line through recurring technical sessions, documentation, feedback, and hands-on mentorship after platform delivery.

Key technologies: Microsoft Azure, Azure DevOps, GitHub Actions, Terraform, Ansible, Python, Bash, Java, SQL, Docker, ELK Stack, networking, ServiceNow

Desjardins — Senior DevOps Engineer (Contract)

Montréal, QC (Remote) | October 2025 – March 2026 — *concurrent engagement alongside the Énergir role*

- Designed and built a Python/FastAPI monitoring service that tested the configuration and health of approximately 250 remote JFrog repositories every four hours and published technology-segmented telemetry to Dynatrace.
- Transformed an initial configuration-check request into a tool-agnostic, configurable validation harness that became the regression safety net for an enterprise Artifactory version upgrade.
- Automated on-demand Artifactory environments with Kubernetes and ArgoCD, enabling repeatable testing of upgrades and configuration changes without risking shared production services.
- Built Splunk alerts that identified manual changes outside approved CI/CD paths, improving auditability and accelerating investigation of configuration drift.
- Partnered with platform administrators to translate operational requirements into measurable health signals, dashboards, validation logic, and maintainable runbooks.

Key technologies: Python, FastAPI, JFrog Artifactory, REST APIs, Docker, Kubernetes, ArgoCD, Helm, GitHub Actions, Dynatrace, Splunk

Tink — DevOps Engineer

Montréal, QC | January 2018 – August 2021

- Centralized Jenkins Pipeline as Code for more than 80 applications across 20 clients, standardizing delivery procedures and adding release visibility through Jira integration.
- Automated patching and kernel-update reboots across more than 600 Linux servers, reducing the process to a monthly verification check with near-zero downtime.
- Built centralized ELK logging and operated production monitoring within a 24/7 on-call rotation, strengthening diagnosis across applications, operating systems, and network dependencies.
- Reduced recurring operational pages through root-cause analysis and prevention, including self-healing automation that detected an unresponsive Elasticsearch cluster and restored service without human intervention.
- Built fleet-wide software inventory and vulnerability visibility covering installed versions, CVEs, end-of-life software, and SSL/TLS posture across more than 600 servers.
- Built an AWS migration target spanning EC2, S3, Route 53, VPC networking, caching, and a serverless relational database; the client cancelled the migration before production cutover.

Key technologies: Python, Bash, SQL, Jenkins, Linux, ELK Stack, PRTG, Puppet, Spacewalk, AWS, DNS, HTTP/TLS, TCP/IP, NetScaler, Jira

SOVO Technologies — Lead Technician to Software Engineer

Montréal, QC | November 2008 – December 2017

- Owned company infrastructure, delivered a zero-downtime server relocation, and introduced redundancy that eliminated core single points of failure.
- Managed, trained, and scheduled technicians while serving as the final quality-assurance gate before production software releases.
- Designed and wrote production software for approximately seven years, including scheduling, voice-recognition evaluation, and multilingual dictionary systems.

Key technologies: C++, Java, SQL, NoSQL, Linux, Windows Server, Active Directory, VMware vSphere, Cisco routing, firewall and VPN administration

Education

Bachelor of Automated Manufacturing Engineering — École de Technologie Supérieure, Montréal, QC | 2005 – 2016

DCS in Computer Science Technology — Cégep André-Laurendeau, Montréal, QC | 2002 – 2005
