

Marc Berthelette

Staff Platform and Reliability Engineer

Smiths Falls, ON, Canada · Remote · marc.berthelette@gmail.com

linkedin.com/in/marc-berthelette-3aba6917 · Bilingual French and English · Incorporated in Canada · Available immediately

Professional Summary

Senior platform and reliability engineer with 18 years of experience building automation, internal platforms, and production controls that help engineering teams deliver safely at scale. At Énergir, standardized CI/CD across 12 teams, more than 70 applications, and nine technology stacks while leading Azure modernization and cross-team adoption. At Desjardins, turned a narrow repository-check request into a configurable Python/FastAPI validation platform that became the regression safety net for an enterprise upgrade. Brings strong software-engineering foundations, cloud infrastructure, Terraform, observability, security-conscious operations, on-call incident response, technical mentorship, and a record of shaping solutions beyond the original scope when the larger platform improvement is the right answer.

Technical Skills

Platform Engineering	Internal developer tooling, reusable delivery patterns, platform enablement, production readiness, technical standards
Software and Automation	Python, FastAPI, Bash, Java, C++, SQL, NoSQL, APIs, testable automation, code review
Cloud and Infrastructure	Microsoft Azure, Terraform, Ansible, Linux, AWS (EC2, S3, Route 53, VPC), networking
Containers and Delivery	Docker, Kubernetes, ArgoCD, Helm, Jenkins, Azure DevOps, GitHub Actions, Git
Reliability and Observability	On-call, incident response, root-cause analysis, Dynatrace, Splunk, ELK Stack, alerting, automated remediation
Security and Governance	Configuration controls, auditability, drift detection, vulnerability visibility, zero-trust collaboration
Leadership	Cross-team influence, technical mentorship, stakeholder communication, proofs of concept, operational documentation

Work Experience

Énergir — Senior DevOps Engineer

Montréal, QC | September 2021 – Present

- Owned CI/CD standardization for 12 application teams and more than 70 applications across nine technology stacks, creating reusable platform patterns that replaced manual deployments with automated validation and quality gates.
- Rebuilt Salesforce delivery with supported tooling, then designed a validation platform that deployed each candidate change into a dedicated sandbox and ran the complete test suite before promotion.
- Automated Oracle delivery after an earlier implementation attempt had failed, translating an unfamiliar runtime into a maintainable delivery capability for the application team.
- Led Azure modernization for several mission-critical services and implemented Terraform and Ansible practices that improved consistency across development, staging, and production.
- Led root-cause analysis for critical incidents and built monitoring, dashboards, and automated remediation to improve reliability and reduce recurring operational work.
- Influenced platform adoption across 12 teams outside any reporting line through recurring enablement sessions, technical recommendations, documentation, and mentorship.
- Introduced AI-assisted engineering practices with hard scope gates and human-validation checkpoints before generated code can reach production.

Key technologies: Microsoft Azure, Terraform, Ansible, Azure DevOps, GitHub Actions, Python, Bash, Java, Docker, ELK Stack, ServiceNow

Desjardins — Senior DevOps Engineer (Contract)

Montréal, QC (Remote) | October 2025 – March 2026 — *concurrent engagement alongside the Énergir role*

- Designed and built a Python/FastAPI service that validated approximately 250 enterprise repositories every four hours and published technology-segmented health telemetry to Dynatrace.
- Extended a narrow configuration-check assignment into a tool-agnostic, configurable platform that administrators could evolve and that became the regression safety net for an enterprise Artifactory upgrade.
- Automated repeatable Artifactory environments with Kubernetes and ArgoCD, enabling safe testing of upgrades and configuration changes.
- Implemented Splunk alerts for manual changes outside approved CI/CD paths, improving auditability and production configuration governance.
- Partnered directly with platform administrators to convert operational needs into reusable tooling, observable controls, and maintainable workflows.

Key technologies: Python, FastAPI, APIs, JFrog Artifactory, Docker, Kubernetes, ArgoCD, Helm, GitHub Actions, Dynatrace, Splunk

Tink — DevOps Engineer

Montréal, QC | January 2018 – August 2021

- Centralized Jenkins Pipeline as Code for more than 80 applications across 20 clients, creating a shared delivery platform across heterogeneous application stacks.
- Automated patching and kernel-update reboots across more than 600 servers, reducing the work to a monthly verification check with near-zero downtime.
- Conceived and built an internal software-inventory platform that surfaced versions, CVEs, end-of-life software, and SSL/TLS posture to product owners who previously lacked that visibility.
- Built centralized ELK logging and self-healing automation for an unstable Elasticsearch cluster, eliminating a recurring need to page an engineer for a known failure mode.
- Built an AWS migration target spanning compute, storage, DNS, VPC networking, caching, and a serverless database; the client cancelled before production cutover.
- Participated in 24/7 on-call and collaborated across development, infrastructure, and client teams to restore service and prevent repeat incidents.

Key technologies: Python, Bash, Java, C++, SQL, Jenkins, Linux, Puppet, ELK Stack, PRTG, Jira, AWS, networking

SOVO Technologies — Lead Technician to Software Engineer

Montréal, QC | November 2008 – December 2017

- Owned company infrastructure, delivered a zero-downtime server relocation, and introduced redundancy that eliminated core single points of failure.
- Managed, trained, and scheduled technicians while serving as the final quality-assurance gate before production releases.
- Wrote production software for approximately seven years, including a scheduling platform, voice-recognition evaluation software, and multilingual dictionary infrastructure.

Key technologies: C++, Java, SQL, NoSQL, Linux, Windows Server, Active Directory, VMware vSphere, networking

Education

Bachelor of Automated Manufacturing Engineering — École de Technologie Supérieure, Montréal, QC | 2005 – 2016

DCS in Computer Science Technology — Cégep André-Laurendeau, Montréal, QC | 2002 – 2005
