

Marc Berthelette

Senior Site Reliability and Platform Engineer

Smiths Falls, ON, Canada · Remote · marc.berthelette@gmail.com

linkedin.com/in/marc-berthelette-3aba6917 · Bilingual French and English · Incorporated in Canada · Available immediately

Professional Summary

Senior site reliability and platform engineer with 18 years of experience making production systems more reliable, observable, and maintainable. Combines deep Linux operations, automation, incident response, Python and Bash development, Terraform, CI/CD, and production observability with a record of eliminating recurring toil. At Énergir, standardized delivery and reliability practices across 12 teams and more than 70 applications. At Desjardins, built a Python/FastAPI health service for approximately 250 enterprise repositories and automated repeatable Kubernetes test environments. Experienced in on-call operations, root-cause analysis, runbooks, stakeholder communication, and improving systems across organizational boundaries.

Technical Skills

SRE and Production Operations	Incident response, root-cause analysis, MTTR reduction, automated remediation, runbooks, on-call, reliability engineering
Linux and Automation	Red Hat Linux, CentOS, Rocky Linux, Ubuntu, Bash, Python, FastAPI, Puppet, Spacewalk
Infrastructure and Cloud	Terraform, Ansible, Microsoft Azure, AWS (EC2, S3, Route 53, VPC), VMware vSphere, networking
Containers and Platforms	Docker, Kubernetes, ArgoCD, Helm, JFrog Artifactory, CloudFoundry
CI/CD and Source Control	Jenkins, Azure DevOps, GitHub Actions, Git, Pipeline as Code, release automation
Observability and Data Systems	Dynatrace, Splunk, ELK Stack, PRTG, metrics, logs, dashboards, alerting, SQL, PostgreSQL-adjacent operations
Leadership and Collaboration	Cross-team enablement, technical mentoring, stakeholder communication, operational documentation, proofs of concept

Work Experience

Énergir — Senior DevOps Engineer

Montréal, QC | September 2021 – Present

- Standardized CI/CD across nine runtimes for 12 application teams and more than 70 applications, replacing manual delivery with reusable pipelines, validation controls, and documented operating practices.
- Led root-cause analysis for critical production incidents and implemented proactive monitoring, dashboards, alerts, and automated remediation to improve reliability and reduce recovery time.
- Separated application failures from platform-pipeline failures in reporting, reducing diagnostic toil and directing issues to the correct engineering team.
- Led Azure modernization for several mission-critical services and implemented Terraform and Ansible practices that standardized environments and reduced configuration drift.
- Automated Oracle delivery after an earlier implementation attempt had failed and rebuilt Salesforce delivery with a validation pipeline that prevented unsafe changes from reaching production.
- Enabled 12 teams outside any reporting line through recurring technical sessions, operational documentation, peer guidance, and hands-on support.

Key technologies: Linux, Microsoft Azure, Terraform, Ansible, Azure DevOps, GitHub Actions, Python, Bash, Docker, ELK Stack, ServiceNow

Desjardins — Senior DevOps Engineer (Contract)

Montréal, QC (Remote) | October 2025 – March 2026 — concurrent engagement alongside the Énergir role

- Built a Python/FastAPI service that tested the health and configuration of approximately 250 remote JFrog repositories every four hours and published actionable telemetry to Dynatrace.
- Expanded the initial request into a tool-agnostic, configurable validation harness that became the regression safety net for an enterprise platform upgrade.
- Automated on-demand Artifactory environments with Kubernetes and ArgoCD, giving administrators isolated, repeatable systems for testing upgrades and configuration changes.
- Built Splunk alerts for manual changes outside approved CI/CD paths, improving auditability and accelerating diagnosis of configuration drift.
- Produced reusable validation logic, operational guidance, and observable health signals for the broader platform-administration team.

Key technologies: Python, FastAPI, Linux, JFrog Artifactory, Docker, Kubernetes, ArgoCD, Helm, GitHub Actions, Dynatrace, Splunk

Tink — DevOps Engineer

Montréal, QC | January 2018 – August 2021

- Centralized Jenkins Pipeline as Code for more than 80 applications across 20 clients, standardizing delivery procedures and improving release visibility through Jira integration.
- Automated patching and kernel-update reboots across more than 600 Linux servers, reducing the process to a monthly verification check with near-zero downtime.
- Operated declarative fleet configuration through Puppet and Spacewalk and implemented centralized ELK logging for production troubleshooting.
- Participated in 24/7 on-call and reduced recurring pages through root-cause analysis and prevention, including self-healing automation for an unstable Elasticsearch cluster.
- Created fleet-wide inventory and vulnerability visibility covering versions, CVEs, end-of-life software, and SSL/TLS posture across more than 600 servers.
- Built an AWS migration target using EC2, S3, Route 53, VPC, caching, and a serverless database; the client cancelled before production cutover.

Key technologies: Linux, Bash, Python, Jenkins, Git, Puppet, Spacewalk, ELK Stack, PRTG, AWS, SQL, networking, incident response

SOVO Technologies — Lead Technician to Software Engineer

Montréal, QC | November 2008 – December 2017

- Owned company infrastructure, delivered a zero-downtime server relocation, and introduced redundancy that eliminated core single points of failure.
- Managed and trained technicians while serving as the final quality-assurance gate before production releases.
- Designed and wrote production software for approximately seven years, including scheduling, voice-recognition evaluation, and multilingual dictionary systems.

Key technologies: C++, Java, SQL, NoSQL, Linux, Windows Server, VMware vSphere, Cisco routing, firewall and VPN administration

Education

Bachelor of Automated Manufacturing Engineering — École de Technologie Supérieure, Montréal, QC | 2005 – 2016

DCS in Computer Science Technology — Cégep André-Laurendeau, Montréal, QC | 2002 – 2005
