

Marc Berthelette

Senior SRE and Platform Engineer | Cloud Reliability | Automation

Smiths Falls, ON, Canada · Montréal hybrid · marc.berthelette@gmail.com

linkedin.com/in/marc-berthelette-3aba6917 · Bilingual: French and English · Available immediately

Professional Summary

Senior SRE and platform engineer with 18 years of experience making complex production systems reliable, observable, and repeatable. At Énergir, standardized CI/CD for 12 teams and 70+ applications, led Azure modernization, introduced Terraform and Ansible practices, and improved recovery through root-cause analysis, monitoring, and automated remediation. At Desjardins, built a Python/FastAPI service that continuously validated approximately 250 enterprise repositories and automated isolated Kubernetes test environments. Deep experience with Linux, Python, CI/CD, infrastructure as code, observability, incident response, and cross-team platform ownership in regulated environments. Bilingual French and English.

Technical Skills

Reliability Engineering	Incident response, RCA, SLI/SLO concepts, observability, alerting, automated remediation, on-call, capacity and performance troubleshooting
Cloud and Infrastructure	Microsoft Azure, Terraform, Ansible, Linux, networking fundamentals, AWS (EC2, S3, Route 53, VPC), VMware vSphere
Automation and Development	Python, FastAPI, Bash, Java, C++, SQL, APIs, infrastructure automation, test automation
CI/CD and Platforms	Azure DevOps, GitHub Actions, Jenkins, Git, ArgoCD, Kubernetes, Docker, Helm, CloudFoundry
Observability and Operations	Dynatrace, Splunk, ELK Stack, PRTG, production dashboards, runbooks, post-incident improvement
Security and Governance	Zero-trust collaboration, configuration governance, drift detection, vulnerability visibility, controlled promotion

Work Experience

Énergir - Senior DevOps Engineer

Montréal, QC | September 2021 - Present

- Standardized CI/CD across nine runtimes for 12 application teams and 70+ applications, replacing manual delivery with reusable pipelines, automated validation, and quality gates.
- Led modernization of 5-10 mission-critical services on Microsoft Azure and implemented Terraform and Ansible practices to make environments repeatable and reduce configuration drift.
- Drove root-cause analysis on critical incidents and implemented monitoring, dashboards, and automated remediation to improve operational visibility and recovery.
- Rebuilt Salesforce delivery with the official CLI and a dedicated validation environment, reducing missed deployment windows from a recurring issue to one since launch.
- Influenced platform adoption across 12 teams without reporting authority, translating infrastructure constraints into delivery patterns application teams could use safely.
- Introduced disciplined AI-assisted engineering practices with hard scope gates and human validation before generated code reaches production.

Key technologies: Azure, Azure DevOps, GitHub Actions, Terraform, Ansible, Python, Bash, Linux, Docker, ELK Stack, ServiceNow

Desjardins - Senior DevOps Engineer (Contract)

Montréal, QC (Remote) | October 2025 - March 2026 - concurrent engagement alongside Énergir

- Built a Python/FastAPI service that tested approximately 250 remote Artifactory repositories every four hours and published technology-specific health signals to Dynatrace.

- Designed the validation logic to be tool-independent and configurable, allowing the same platform to become the regression safety net for an enterprise Artifactory upgrade.
- Automated on-demand Artifactory environments with Kubernetes and ArgoCD so administrators could test upgrades and configuration changes in repeatable, isolated environments.
- Implemented Splunk alerts for changes made outside approved CI/CD paths, improving auditability and exposing configuration drift quickly.

Key technologies: Python, FastAPI, Kubernetes, ArgoCD, GitHub Actions, Docker, Helm, Dynatrace, Splunk, JFrog Artifactory

Tink - DevOps Engineer

Montréal, QC | January 2018 - August 2021

- Centralized Jenkins Pipeline as Code for 80+ applications across 20+ clients, standardizing delivery and adding release visibility through Jira.
- Automated operating-system patching and kernel-update reboots across 600+ Linux servers, reducing the process to a monthly verification check with near-zero downtime.
- Built compute, storage, DNS, networking, caching, and database components for an AWS migration target using EC2, S3, Route 53, VPC, memcached, and a serverless relational database.
- Built fleet-wide software inventory and vulnerability visibility covering application versions, CVEs, end-of-life software, and SSL/TLS posture across 600+ servers.
- Reduced on-call interruptions through RCA and prevention, including self-healing automation that restored an unstable Elasticsearch cluster without paging an engineer.

Key technologies: Linux, Jenkins, Bash, Python, Puppet, ELK Stack, PRTG, Jira, AWS, networking, automation

SOVO Technologies - Lead Technician to Software Engineer

Montréal, QC | November 2008 - December 2017

- Owned company infrastructure, delivered a zero-downtime server relocation, and introduced redundancy that removed core single points of failure.
- Wrote production C++ and Java software for approximately seven years, including scheduling and voice-recognition evaluation systems.
- Managed and trained technicians while remaining the final quality-assurance gate for production releases.

Key technologies: C++, Java, SQL, Linux, Windows Server, VMware vSphere, networking, backup and recovery

Education

Bachelor of Automated Manufacturing Engineering - École de Technologie Supérieure, Montréal, QC | 2005 - 2016

DCS in Computer Science Technology - Cégep André-Laurendeau, Montréal, QC | 2002 - 2005
