

Marc Berthelette

Senior Site Reliability Engineer | Production Operations | Automation

Smiths Falls, ON, Canada · Montréal hybrid · marc.berthelette@gmail.com

linkedin.com/in/marc-berthelette-3aba6917 · Bilingual: French and English · Available immediately

Professional Summary

Senior reliability and DevOps engineer with 18 years of experience operating production infrastructure, resolving complex incidents, and replacing recurring manual work with automation. Proven record across Linux and VMware environments, 24/7 on-call operations, root-cause analysis, monitoring, CI/CD, and infrastructure lifecycle work. At Tink, automated maintenance across 600+ servers and reduced on-call interruptions through prevention and self-healing. At Desjardins, built continuous health validation for approximately 250 enterprise repositories. Bilingual French and English, calm under operational pressure, and effective at learning unfamiliar platforms while maintaining service continuity.

Technical Skills

Production Reliability	N3-style troubleshooting, incident response, RCA, postmortems, on-call, runbooks, service restoration, continuous improvement
Infrastructure Operations	Linux, Windows Server, VMware vSphere, networking, backup and recovery, patching, capacity and performance troubleshooting
Automation and CI/CD	Python, Bash, Jenkins, Azure DevOps, GitHub Actions, Git, Terraform, Ansible, Puppet, ArgoCD
Observability	Dynatrace, Splunk, ELK Stack, PRTG, dashboards, alerting, health validation, automated remediation
Containers and Platforms	Kubernetes, Docker, Helm, JFrog Artifactory, Nexus, CloudFoundry
Development	Python, FastAPI, C++, Java, SQL, APIs, test and release automation

Work Experience

Énergir - Senior DevOps Engineer

Montréal, QC | September 2021 - Present

- Drove root-cause analysis on critical production incidents and implemented monitoring, dashboards, and automated remediation to improve service recovery and reduce recurring failures.
- Standardized CI/CD for 12 teams and 70+ applications across nine runtimes, replacing fragile manual delivery with repeatable automation and validation controls.
- Automated Oracle delivery after an earlier implementation attempt had failed, converting a fully manual release process into a dependable production workflow.
- Led Azure modernization for 5-10 mission-critical services and introduced Terraform and Ansible practices that improved consistency across environments.
- Rebuilt Salesforce delivery with automated pre-promotion validation, reducing missed deployment windows from a recurring problem to one since launch.
- Introduced AI-assisted engineering practices with explicit scope gates and human validation before generated code is promoted.

Key technologies: Linux, Azure, Azure DevOps, GitHub Actions, Terraform, Ansible, Python, Bash, Docker, ELK Stack, ServiceNow

Desjardins - Senior DevOps Engineer (Contract)

Montréal, QC (Remote) | October 2025 - March 2026 - concurrent engagement alongside Énergir

- Built a Python/FastAPI health service that validated approximately 250 remote Artifactory repositories every four hours and published results to Dynatrace.
- Turned a narrow configuration check into a configurable validation platform that became the regression safety net for an enterprise Artifactory upgrade.

- Automated isolated Artifactory environments with Kubernetes and ArgoCD, enabling administrators to test upgrades and changes safely.
- Built Splunk alerting for configuration changes outside approved CI/CD paths and implemented lifecycle policies that improved governance and reduced waste.

Key technologies: Python, FastAPI, Linux, JFrog Artifactory, Kubernetes, ArgoCD, GitHub Actions, Dynatrace, Splunk

Tink - DevOps Engineer

Montréal, QC | January 2018 - August 2021

- Participated in 24/7 on-call and reduced paging frequency from roughly one page every two rotations to one every four or five through RCA, prevention, and operational automation.
- Automated patching, maintenance, and kernel-update reboots across 600+ servers, reducing the work to a monthly verification check with near-zero downtime.
- Implemented self-healing for an unstable Elasticsearch cluster so monitoring restored service automatically instead of paging an engineer.
- Centralized Jenkins Pipeline as Code for 80+ applications across 20+ clients and standardized release procedures across technology stacks.
- Built fleet-wide inventory and vulnerability visibility covering application versions, CVEs, end-of-life software, and SSL/TLS posture.

Key technologies: Linux, Jenkins, Bash, Puppet, Spacewalk, ELK Stack, PRTG, Jira, AWS, networking, server maintenance

SOVO Technologies - Lead Technician to Software Engineer

Montréal, QC | November 2008 - December 2017

- Owned company IT infrastructure across VMware vSphere, Windows Server, Linux, networking, identity, firewall/VPN, and backup and recovery.
- Delivered a zero-downtime server relocation and introduced a redundant architecture that eliminated core single points of failure.
- Managed and trained technicians, handled escalated technical problems, and served as the final quality-assurance gate before production releases.
- Wrote production C++ and Java software for approximately seven years, including scheduling and voice-recognition evaluation systems.

Key technologies: VMware vSphere, Linux, Windows Server, Active Directory, networking, backup and recovery, C++, Java, SQL

Education

Bachelor of Automated Manufacturing Engineering - École de Technologie Supérieure, Montréal, QC | 2005 - 2016

DCS in Computer Science Technology - Cégep André-Laurendeau, Montréal, QC | 2002 - 2005
