Professional Summary

Senior platform and DevOps engineer with 18 years across infrastructure and software engineering. Built automation and internal platforms for 600+ Linux servers, standardized CI/CD across 80+ applications at Tink and 70+ applications at Énergir, and delivered Python platform tooling for 250 enterprise artifact repositories at Desjardins. Deep practice in Linux, Python, Bash, Puppet, Ansible, Terraform, CI/CD, observability, incident response, and automated remediation, with hands-on Kubernetes and ArgoCD infrastructure automation in financial services. Takes ownership of the whole operational problem and builds durable, self-service solutions rather than isolated scripts.

Core Expertise

Linux Platform Engineering	Linux administration and troubleshooting, fleet lifecycle automation, Puppet, Spacewalk, Bash, automated patching and remediation
Infrastructure Automation	Terraform, Ansible, Puppet, Kubernetes, Docker, ArgoCD, Microsoft Azure, AWS
Developer Infrastructure	Internal platform tooling, Python/FastAPI APIs, CI/CD, pipeline-as-code, self-service workflows, artifact management
Observability & Reliability	Dynatrace, Splunk, ELK, metrics/logging/alerting, incident response, RCA, MTTR reduction, 24/7 on-call
Programming & Systems	Python, FastAPI, Bash, C++, Java, SQL, NoSQL, Red Hat Linux, CentOS, RockyOS, Ubuntu

Work Experience

Tink — DevOps Engineer

Montréal, QC | January 2018 – August 2021

- Automated OS-level patching and kernel-update reboots across 600+ Linux servers, reducing the process to a monthly verification check with near-zero downtime.
- Managed fleet configuration declaratively through Puppet and Spacewalk after VM provisioning, eliminating hand-tuned configuration and package state across the estate.
- Centralized Jenkins Pipeline as Code for 10–15 developers maintaining 80+ applications for 20+ clients, standardizing delivery across heterogeneous stacks and improving release visibility through Jira.
- Conceived and built an internal software-inventory platform cataloguing every installed application and version across the fleet, exposing CVE, end-of-life, and SSL/TLS risks directly to product owners.
- Built centralized ELK log aggregation and an automated self-healing response for a recurring Elasticsearch failure, removing the need for human intervention; participated in the 24/7 on-call rotation.
- Built the compute, caching, database, DNS, and network layers of an AWS migration target using EC2, S3, Route 53, VPC, self-managed memcached, and a serverless relational database; the client cancelled before production cutover.

Key technologies: Linux, Python, Bash, Puppet, Spacewalk, Jenkins, ELK Stack, PRTG, CentOS, RockyOS, VMware, AWS

Desjardins — Senior DevOps Engineer (Contract)

Montréal, QC (Remote) | October 2025 – March 2026 — *concurrent engagement, delivered alongside the Énergir role*

- Built a Python/FastAPI monitoring service that validated roughly 250 enterprise JFrog repositories across seven package ecosystems every four hours and published results to Dynatrace.
- Designed the validation logic and test set as reusable platform capabilities, allowing administrators to add their own cases and using the same harness to de-risk an enterprise JFrog upgrade.
- Automated provisioning of on-demand Artifactory environments with Kubernetes and ArgoCD, providing administrators with self-service infrastructure for safe testing.

- Implemented artifact lifecycle policies and Splunk alerting for configuration changes made outside the CI/CD pipeline.

Key technologies: Python, FastAPI, Kubernetes, ArgoCD, GitHub Actions, JFrog Artifactory, Dynatrace, Splunk, Docker, Helm

Énergir — Senior DevOps Engineer

Montréal, QC | September 2021 – Present

- Owned CI/CD standardization for 12 application teams and 70+ applications across nine distinct runtimes, replacing manual delivery with automated pipelines and quality gates.
- Led cloud modernization for 5–10 mission-critical services on Microsoft Azure and implemented Terraform and Ansible automation to standardize provisioning and reduce configuration drift.
- Drove RCA on critical incidents and implemented monitoring, observability dashboards, and automated remediation to reduce MTTR.
- Rebuilt Salesforce delivery with the official CLI and added a validation-sandbox merge gate, reducing a recurring missed-deployment problem to one miss since launch.
- Led adoption without reporting authority through recurring enablement sessions with all 12 application teams, turning delivered tooling into sustained developer workflows.

Key technologies: Microsoft Azure, Terraform, Ansible, Azure DevOps, GitHub Actions, Python, Bash, CloudFoundry, Databricks, Salesforce

SOVO Technologies — Lead Technician → Software Engineer

Montréal, QC | November 2008 – December 2017

- Owned company infrastructure, including a zero-downtime server relocation and redundant architecture eliminating single points of failure, while managing and training a technician team.
- Wrote production software for roughly seven years: a production scheduling platform, voice-recognition evaluation software, and multilingual dictionary infrastructure.

Key technologies: C++, Java, SQL, Windows Server, Linux, Active Directory, VMware vSphere, Cisco routing, firewall/VPN

Education

Bachelor of Automated Manufacturing Engineering — École de Technologie Supérieure (ÉTS), Montréal, QC | 2005 – 2016

DCS in Computer Science Technology — Cégep André-Laurendeau, Montréal, QC | 2002 – 2005
